Module Central philosophical topics and works

06SM160-504 / Module

Description:

General description:

Das Pflichtmodul «Zentrale Themen und Werke der Philosophie» besteht aus einer 45-minütigen mündlichen Prüfung zu einem Thema oder zu zwei philosophischen Werken. Letztere können frei aus den Lektürelisten A und B gewählt werden (vgl. programmspezifische Wegleitung). Es ist möglich, beide Texte aus einer der beiden Lektürelisten zu nehmen oder auch aus jeder Liste ein Text. Zu beachten ist aber, dass die Texte aus der Lektüreliste A bei allen prüfenden Personen gewählt werden können, diejenigen der Lektüreliste B aber nur nach ausdrücklicher Zustimmung durch die prüfende Person. Vor der Buchung des Moduls verständigen Sie sich mit einer Lehrstuhlinhaberin bzw. einem Lehrstuhlinhaber oder einer Privatdozentin bzw. einem Privatdozenten, die oder der im betreffenden Semester mündliche Prüfungen abnimmt (gemäss Vorlesungsverzeichnis), über das Thema bzw. über die zwei Werke. Die Studierenden müssen nach erfolgter Absprache mit der prüfenden Person und der Modulbuchung dem Sekretariat des Philosophischen Seminars (philsem@philos.uzh.ch) das vereinbarte Thema bzw. die gewählten Werke mitteilen (spätestens Ende der Buchungszeit). Das Sekretariat des Philosophischen Seminars versendet in der Regel in der sechsten Woche der Vorlesungszeit die Prüfungspläne mit den genauen Zeit- und Raumangaben. Die im Vorlesungsverzeichnis angekündigten Prüfungstermine sind verbindlich. Studierende, die, aus welchen Gründen auch immer, nicht zum Prüfungstermin erscheinen, informieren möglichst frühzeitig das Sekretariat des Philosophischen Seminars, die prüfende Person sowie (sofern bereits bekannt) die Beisitzerin oder den Beisitzer. Studierende, die aus triftigen und belegbaren Gründen (wie etwa Krankheit) am Prüfungstermin verhindert sind, können ein Stornierungsgesuch einreichen.

Die Studierenden entwickeln in Absprache mit einer Dozentin oder einem Dozenten eine geeignete Fragestellung aus dem Bereich der Metaphysik, die sie (auf ca. 20 Seiten bzw. 52'000 Zeichen inklusive Leerzeichen) schriftlich bearbeiten. Neben dem Selbststudium und der Gruppenarbeit (in der Studierende gemeinsam ihre Fragestellungen, Dispositionen und Arbeiten erörtern) umfasst das Modul mindestens eine individuelle schriftliche Rückmeldung zu einer angefertigten Disposition und mindestens ein 30-minütiges Betreuungsgespräch (zu einer ersten Version der vollständigen Arbeit) sowie eine abschliessende, mindestens 20-minütige Besprechung, in der die Studierenden eine überarbeitete Version ihrer Arbeit verteidigen. Bewertet wird die im Portfolio dokumentierte Gesamtleistung.

ECTS: 6

Learning Outcome:

Die Fähigkeit selbständig eine philosophische Frage aus dem Bereich der Metaphysik zu entwickeln, ein geeignetes Vorgehen zu ihrer Bearbeitung zu finden und sie unter Berücksichtigung unterschiedlicher, kritisch zu würdigender Positionen zu beantworten; die Fähigkeit verschiedene metaphysische Theorien und Argumente aufeinander zu beziehen; die Fähigkeit eine eigene philosophische Argumentation zu entwickeln und eine philosophische Arbeit im Bereich der Metaphysik zu verfassen, die sowohl in formaler als auch inhaltlicher Hinsicht wissenschaftlichen Standards genügt

Module Bachelor's Thesis

06SM200-BA / Module

Description:

General description:

Die Bachelorarbeit ist ein wissenschaftlicher Aufsatz gemäss den in der Psychologie üblichen wissenschaftlichen Standards. Sie erfordert eine selbst erarbeitete Strukturierung eines Themas und beruht auf der Sammlung, der kritischen Auswertung sowie der übersichtlichen und korrekten Darstellung von Fachliteratur, die für die Fragestellung relevant ist. Die Bachelorarbeit muss sowohl inhaltlichen, methodischen als auch formalen Kriterien genügen. Für die Bewertung der Bachelorarbeit gelten unter anderem folgende Kriterien: Inhaltliche Vollständigkeit und Verständnis des Themas, argumentative Kohärenz, Auswahl und Verständnis der Literatur, Einhaltung der formalen Kriterien wie Aufbau und Gliederung der Arbeit, korrektes Zitieren, vollständige Literaturliste, sprachliche Präzision sowie selbständiges Arbeiten. Im begleitenden Workshop Bachelorarbeit wird in die Planung und Gestaltung von wissenschaftlichen Berichten mit besonderem Augenmerk auf die Bachelorarbeit eingeführt.

ECTS: 6

Notes:

Die Themen der Bachelorarbeiten werden von den Professuren ausgeschrieben. Die Studierenden können jedoch bei der Modulbuchung nicht das Thema selbst, sondern nur die Professur, an der sie die Arbeit schreiben möchten, auswählen. Die Themenvergabe erfolgt nach der Buchung. Das genaue Verfahren bestimmen die Professuren. Die Themenliste aller Professuren, die im aktuellen Semester Themen für die Bachelorarbeiten anbieten finden Sie hier: <https://t.uzh.ch/1AN>

Learning Outcome:

Die Bachelorarbeit ist der Ausweis über die Fähigkeit, eine wissenschaftliche Aufgabenstellung innerhalb der vorgegebenen Frist selbständig zu bearbeiten und adäquat darzustellen. Dabei handelt es sich um die schriftliche Bearbeitung eines vorgegebenen, psychologisch relevanten Themas.

Module Introduction to Clinical Psychology and Psychopathology

06SM200-400 / Module

Description:

General description:

Die Vorlesung bietet eine umfassende und tiefgehende Auseinandersetzung mit der Entstehung, Persistenz und Behandlung psychischer Störungen. Dabei werden die neuesten wissenschaftlichen Entwicklungen in der Psychopathologie, Diagnostik und der Untersuchung von Störungsmodellen thematisiert. Fokussiert wird weiterhin der Zusammenhang zwischen theoretischen Annahmen und innovativen therapeutischen Interventionen. Das Modul besteht aus zwei Veranstaltungen, die über zwei Semester hinweg grundlegende Konzepte, moderne Ansätze und praxisnahe Anwendungsfelder abdecken. Im Herbstsemester beginnt die Veranstaltung mit einer Einführung in die Psychopathologie. Die Vorlesung bietet eine fundierte Auseinandersetzung mit zentralen Konzepten der Psychopathologie und verknüpft diese mit aktuellen Forschungsergebnissen. Zu den behandelten Themen gehören grundlegende Begriffe wie psychische Gesundheit und Störung. Besondere Schwerpunkte sind die Betrachtung einzelner Störungsbilder und ihrer spezifischen Merkmale. Weitere Themen umfassen psychopathologische und diagnostische Modelle (z. B. RDoC und HiTOP) und deren Anwendung, Suizidalität und schwere psychische Erkrankungen, Betrachtungen über die Lebensspanne sowie kulturelle Aspekte. Im Frühjahrssemester liegt der Schwerpunkt auf neuen therapeutischen Ansätzen und deren theoretischen Grundlagen. Die Veranstaltung «Einführung in die Klinische Psychologie und Psychopathologie» befasst sich mit ethischen Aspekten der Klinischen Psychologie sowie psychotherapeutischen Grundlagen. Die Teilnehmer:innen lernen moderne diagnostische Konzepte und Methoden zur Veränderungsmessung kennen. Darüber hinaus werden sowohl klassische als auch neue psychotherapeutische Verfahren vorgestellt, wobei aktive Mechanismen, Wirkfaktoren und die therapeutische Allianz im Fokus stehen. Digitale Methoden sowie kontroverse Themen, aktuelle Forschungstrends und hochaktuelle wissenschaftliche Erkenntnisse zur Behandlung spezifischer Störungsbilder werden ebenfalls thematisiert. Als zentrales Lehrbuch für die Vorlesungsreihe dient das Lehrbuch «Klinische Psychologie und Psychotherapie» von Hoyer & Knappe (2021, Springer). Für das gesamte Modul werden 8 Kreditpunkte vergeben.

ECTS: 8

Learning Outcome:

Lernziele der Vorlesung für Teil 1 umfassen die Vermittlung von Grundbegriffen der Psychopathologie und Klinischen Psychologie, die Klassifikationsmethoden, Epidemiologie, Störungslehre und Befunderhebung bei der Diagnostik psychischer Störungen sowie Interventionsmethoden.

Module Psychopathology Taught Online (PTO)

06SM200-402 / Module

Description:

General description:

PTO ist ein computerisiertes Selbstlernprogramm für die Psychopathologie über 2 Semester. Es erfordert ein eigenständiges Durcharbeiten von Curriculum 1 im Herbstsemester, und von Curriculum 2 im Frühjahrssemester. Es soll selbständig ein profundes theoretisches sowie anwendungsorientiertes Störungswissen erarbeitet werden, welches regelmässig anhand von Übungen in Form von e-learning überprüft wird. Im Anschluss an diesen Kurs kennen die Studierenden wichtige psychopathologische Störungsbilder und können diese im klinischen Setting erkennen. Curriculum 1 Herbstsemester: Es werden folgende psychopathologische Störungsbilder selbständig erarbeitet: Affektive Störungen (F3), Neurotische, Belastungs- und somatische Störungen (F4 inkl. F43), Organische Störungen (F0). Curriculum 2 Frühjahrssemester: Persönlichkeits- und Verhaltensstörungen (F6), Verhaltens- und emotionale Störungen mit Beginn in der Kindheit und Jugend (F9), Schizophrenien (F2), Substanzstörungen (F1).

ECTS: 4

Learning Outcome:

Vermittlung von Grundlagen- und detailliertem Wissen im Bereich der Psychopathologie des Erwachsenenalters.

Es wird dringend empfohlen, vor dem Besuch des Moduls Ausgewählte Themen der Psychopathologie das Modul «Einführung in die Klinische Psychologie und Psychopathologie» zu absolvieren, da diese Module inhaltlich aufeinander aufbauen.

Assessment:

6 Übungen (3 pro Semester), welche jeweils aus zwei Übungsteilen (1. Teil: Offene Fragen; 2. Teil: Fallanalyse inkl. Stellen einer Verdachtsdiagnose) bestehen. Die Übungen werden jeweils zu Beginn des Semesters hochgeschaltet. Für das Bestehen des Moduls ist: die pünktliche Abgabe aller sechs Übungen und eine Mindestnote von 4 für jede einzelne Übung zwingende Voraussetzung. Module Clinical Psychology with a Special Focus on Children/Youth and Couples/Families

06SM200-403 / Module

Description:

General description:

Es wird in ein interpersonelles Störungsverständnis eingeführt und insbesondere die Bedeutung von Beziehungen für die Ätiologie, Aufrechterhaltung, den Verlauf, die Remission und das Rückfallrisiko diskutiert. Das Konzept der "We-Disease" wird dargestellt und in seiner Relevanz für die Behandlung von Störungen diskutiert. Ein Hauptfokus liegt auf den vier wichtigsten familiären Risikofaktoren für kindliche Störungen. Diese werden vor dem Hintergrund theoretischer Modelle und empirischer Befunde diskutiert. Neben Auswirkungen von chronischen destruktiven Partnerschaftskonflikten werden auch Folgen von Scheidungen für Erwachsene und Kinder besprochen. Es wird auf das Thema der familiären Gewalt eingegangen. Aufbauend auf familiären Resilienzfaktoren werden präventive Ansätze und therapeutische Interventionen bei Kindern, Jugendlichen und Paaren/Familien vorgestellt. Es wird aufgezeigt, welchen Nutzen ein interpersonelles Störungsverständnis theoretisch und praktisch hat.

ECTS: 4

Learning Outcome:

Ziel der Vorlesung ist es, den Studierenden die Bedeutung familiärer Risiko- und Resilienzfaktoren aufzuzeigen und sie für die wichtige Rolle interpersoneller Beziehungen (insbesondere von Paarbeziehungen und Familienbeziehungen) im Verständnis von Ätiologie und Performanz von psychischen Störungen und deren Behandlung zu sensibilisieren. Die Studierenden sollen erkennen, dass Störungen bei Kindern und Erwachsenen nicht isoliert vom sozialen Kontext verstanden und behandelt werden können und Modelle und Theorien sowie Forschungsbefunde kennenlernen, welche diese Sicht stützen. Beim Faktenwissen sollen die Studierenden wichtige Fachtermini, beim konzeptionellen Wissen Klassifikationen und Kategorisierungen von Störungen in der Familie und beim prozeduralen Wissen Methoden der Behandlung von Störungen unter Einbezug einer interpersonellen Perspektive kennen.

Module Statistics 3

06SM200-500 / Module

Description:

General description:

This course begins with a review of multiple regression. Building on this, multilevel models (mixed models) will be discussed with a particular focus on longitudinal data (measurement points nested within individuals). Finally, structural equation models (SEM) for measuring change will be introduced. Following the lecture, there will be an opportunity to practice the practical application and interpretation of the methods on your own laptop, accompanied by tutors.

ECTS: 4

Learning Outcome:

Students will gain an in-depth understanding of the methods covered, enabling them to recognize the types of problems for which each method is suitable. They will also be able to apply the methods independently and interpret the results correctly.

Module Economic and Consumer Psychology

06SM200-510 / Module

Description:

General description:

We constantly make decisions, like what to pick from the menu in a restaurant or saving money for pension. Such decisions can have short or long-term consequences. Moreover, our choices can also affect the well-being of those around us. Spending money on own consumption or donating this money to charity illustrate that our decisions are rarely made in a social vacuum. Here, we discuss our current scientific understanding of decision making with a focus on its economic and social consequences. We start by introducing theories that define how people should choose. This allows us to interpret important empirical findings that challenge the idea that humans are always capable of making rational decisions and how bounds on rationality can lead to suboptimal choices. Understanding human decision architecture will help to understand how advertising tries to influence our consumption behavior and how policy makers use nudging to change our choices. In the second part, we will move to social decision making. Humans are social animals and much of our remarkable evolutionary trajectory has been attributed to our capacity to work together. After a short introduction to game theory, we will discuss the dilemma of public goods and the psychology of human cooperation and conflict. Lastly, we will discuss unethical behavior and corruption. Corruption can lead to substantial socioeconomic costs. Empirical findings illuminate when people try to circumvent social rules to enrich themselves and what psychological mechanisms can reduce temptations to exploit others or engage in unethical behavior.

ECTS: 4

Learning Outcome:

After completion of this course, you should be able to summarize and describe basic concepts of decision theory and define what constitutes rational decision making. This will allow you to identify violations of rationality and predict when humans make sub-optimal choices. You can apply theories and empirical findings to the marketing context and understand how policy makers use techniques like nudging to influence decision making. Being familiar with concepts of game theory will allow you to formalize social situations as 'games' and identify the incentive structure of real-world social dilemmas. You can further describe evolutionary theories on cooperation that allow you to predict under what circumstances cooperation is more likely to emerge. The theoretical knowledge will further enable you to diagnose whether and when individuals behave unethically and how to design social environments that reduce the likelihood of ethical misconduct.

Module Clinical Neuropsychology

06SM200-511 / Module

Description:

General description:

Die Klinische Neuropsychologie ist ein Teilgebiet der Neurowissenschaften und der Neurologie, das sich mit dem Erleben und Verhalten von Menschen befasst, die unter erworbenen Beeinträchtigungen (und Veränderungen) des Zentralnervensystems leiden. Aus diesen Beeinträchtigungen resultieren funktionelle Defizite, Aktivitätsstörungen und Einschränkungen der Partizipation an Lebensbereichen. Die Klinische Neuropsychologie beschäftigt sich mit der Diagnose der Defizite und Einschränkungen und der Entwicklung und Umsetzung therapeutischer Methoden. Im Rahmen der Therapie werden entweder die Defizite vermindert oder der Person eine bessere Anpassung an ihre Lebensumwelt ermöglicht. Die moderne Klinische Neuropsychologie baut auf den Erkenntnissen der modernen Neurowissenschaften auf und trägt auch zu einem besseren Verständnis der neuronalen Basis von Erleben und Verhalten bei.

ECTS: 4

Learning Outcome:

Die Studierenden können 1) die wesentlichen neuropsychologischen Syndrome erläutern, 2) deren neurologische Ursachen klar differentialdiagnostisch abgrenzen, 3) wissen die wichtigsten diagnostischen Verfahren zu nutzen, um diese Störungen zu diagnostizieren und sind 4) in der Lage, grundlegende rehabilitative Massnahmen zur Behandlung dieser neuropsychologischen Syndrome zu wählen. Des Weiteren sollen die Studierenden die neuropsychologischen Syndrome anhand aktueller neurowissenschaftlicher Erkenntnisse erklären und korrekt in die aktuelle Literaturlage einsortieren können.

06SM226-023 / Module

Description:

General description:

Im Modul werden Methoden und Verfahren erarbeitet, die speziell relevant sind für eigene Forschungsvorhaben und kleinere Datensätze. Neben den grundlegenden Konzepten der angewandten Statistik und dem Wissen zu Studiendesign, Stichprobenziehung und Entwicklung von Erhebungsinstrumenten, gehören dazu insbesondere Methoden und Verfahren zur Generierung von Daten (z.B. im Rahmen experimenteller Designs) und zu deren Auswertung (z.B. non-parametrische statistische Verfahren). Das Modul wird ab HS 2020 jedes zweite Herbstsemester angeboten.

Module Restoration of archaeological objects

06SM682-514 / Module

Description:

General description:

Das Praktikum gibt eine Einführung in die Konservierung-Restaurierung von Metallen (Eisen, Kupferlegierungen, Silber, Gold), Keramik, Glas und organischem Material. Es thematisiert den Kreislauf vom Rohstoff über die Herstellung und Verarbeitung bis zur Bodenlagerung und der damit verbundenen Degradation der verschiedenen Materialgruppen. Die Studierenden lernen die für die Restaurierung wichtigsten chemischen Grundlagen und Analyseverfahren kennen. Ein thematischer Fokus liegt auf den Möglichkeiten, verschiedene Materialien, Materialzusammensetzungen sowie antike Herstellungstechniken voneinander zu unterscheiden. In der praktischen Übung kleben und ergänzen sie selbst Keramik und führen den Sandguss aus. Anhand von einschlägigen Beispielen wird der fachgerechte Umgang mit archäologischem Fundmaterial aufgezeigt.

ECTS: 6

Learning Outcome:

Die Studierenden besitzen Grundkenntnisse in der Konservierung-Restaurierung archäologischer Objekte. Sie haben das nötige Basiswissen zu chemischen Vorgängen, um Verfallsprozesse von verschiedenen Materialien zu verstehen und das Gefahrenpotential für archäologische Frischfunde zu erkennen. Sie sind über grundlegende Analyseverfahren und deren Möglichkeiten informiert. Sie kennen Möglichkeiten, um verschiedene Materialien, Materialzusammensetzungen sowie antike Herstellungstechniken voneinander zu unterscheiden. An Keramikfunden können sie erste restauratorische Arbeiten durchführen, die der weiteren Fundbearbeitung dienen. All diese Grundlagen befähigen die Studierenden dazu, auf einer archäologischen Ausgrabung einfache Massnahmen selbst durchzuführen und im richtigen Moment eine Fachperson beizuziehen.

06SM682-516 / Module

Description:

General description:

Der Schwerpunkt des Moduls liegt auf der Museumspraxis. Welche verschiedenen Typen von Museen und Sammlungen gibt es? Wie können Objekte auf spielerische Weise informativ und gleichzeitig ästhetisch ausgestellt werden? Wie entsteht eine Ausstellung? Dabei soll Schritt für Schritt von der Sponsorenwerbung bis zur Eröffnung erarbeitet werden, was zum Gelingen einer Ausstellung notwendig ist. Im Rahmen von Ausstellungsbesichtigungen wird untersucht, wie die Medien Film, Fotografie und Computeranimationen in Museen eingesetzt werden und inwieweit sie für die didaktische Erschliessung von Themen gerechtfertigt sind. Dabei spielt auch die Inszenierung von Objekten und Rekonstruktionen von Befunden eine wichtige Rolle. Ein Fokus wird zudem auf Ausstellungstexten liegen: Wie entstehen gute Einleitungstexte und Objektbeschreibungen? Ein weiteres Thema widmet sich der Pressearbeit einer Ausstellung, um aufzuzeigen, wie eine breite Öffentlichkeit informiert und ins Museum gelockt werden kann.

ECTS: 6

Learning Outcome:

Die Studierenden haben praxisbezogene Kenntnis davon, wie eine Ausstellung entsteht - von der Idee, über die Finanzierung bis zur fertigen Präsentation. Sie kennen verschiedene Gestaltungsarten und Inszenierungen und wissen, wie Fotografien, Filme und andere Medien in Ausstellungen eingesetzt werden. Sie sind in der Lage allgemein verständliche, kurze Ausstellungstexte zu erstellen und wie Journalisten einen Presstext zu schreiben, um Ausstellungen zu bewerben.

Description:

General description:

Die Masterarbeit ist eine eigenständige Forschungsleistung zu einem komplexeren Thema in den Archäologien. Es sind dabei die in dem Fach üblichen Regeln zu befolgen. Das Thema wird mit der Betreuungsperson festgelegt und beruht auf einem eigenen Vorschlag der oder des Studierenden. Ziele, Methoden und Ergebnisse sind im Rahmen des Moduls "Kolloquium" zur Diskussion zu stellen. Die Studierenden erwerben vertiefte Fach- und Medienkompetenzen zur Bearbeitung und Vermittlung eines vertieften wissenschaftlichen Themengebietes.

Module Principles of interdisciplinary work

06SM683-001 / Module

Description:

General description:

Die Veranstaltung bietet eine spezialisierte Einführung in die für die Archäologien relevanten Techniken wissenschaftlichen Arbeitens. Im Fokus stehen naturwissenschaftliche und komparative Forschungsansätze. Es werden die Methoden und Arbeitstechniken vorgestellt, die rein archäologische Befundinterpretationen ergänzen. Ethnoarchäologische und aussereuropäische archäologische Forschungsthemen sind den Studierenden bekannt. Die Ergänzung der kulturwissenschaftlichen Arbeitsweise durch naturwissenschaftliche und sozialwissenschaftliche Methoden erweitert das Ausbildungsfeld der Studierenden.

ECTS: 9

Learning Outcome:

Die Studierenden wissen, welche archäologische Nachbardisziplinen für interdisziplinäres Arbeiten relevant sind. Sie sind vertraut mit den Spezifika der verschiedenen für die archäologische Forschung relevanten Fächer. Sie wissen, wie archäologische Befunde und Funde gewonnen und fächerübergreifend analysiert und ausgewertet werden. Sie kennen die geläufigen absoluten Datierungsmethoden, die für die Archäologie relevant sind. Sie erhalten Einblicke in komparative archäologische und ethnoarchäologische Arbeitsweisen. Die Studierenden können die in den interdisziplinären archäologischen Wissenschaften üblichen Arbeitstechniken an einfachen Beispielen anwenden.

Module Introduction to the study of Archaeologies

06SM682-001 / Module

Description:

General description:

Das Modul bietet im ersten Semester einerseits eine Einführung in die Geschichte der Fächer, deren fachspezifische Inhalte und grundlegende Methoden (Umgang mit archäologischen Funden und Denkmälern und deren Datierung). Andererseits gibt es - unter anderem im Rahmen von Kurzexkursionen - einen Einblick in die archäologische Praxis (Prospektion, Grabung, Museum), in die wichtigsten Institutionen und damit in die Berufsfelder für Absolventen. Des Weiteren vermittelt es die für die Archäologien relevanten Techniken wissenschaftlichen Arbeitens (Literaturrecherche; Bilddatenbanken; Referate und schriftliche Arbeiten). Darauf aufbauend verfassen die Studierenden im zweiten Semester eine schriftliche Arbeit zu einem vorgegebenen Thema im Selbststudium.

ECTS: 12

Learning Outcome:

Die Studierenden haben einen Überblick über die archäologischen Disziplinen und ihre Entstehungsgeschichte sowie über die entsprechenden Fachbereiche und Spezialisierungen an der UZH. Sie verfügen über erste Grundkenntnisse zu den Methoden (Umgang mit Quellen, Datierungsmethoden) und zur archäologischen Praxis (Prospektion, Grabung, Museum). Sie kennen die Anforderungen an schriftliche Arbeiten und Referate, Literaturrecherche und Bibliographie im Studium. Sie können die Techniken wissenschaftlichen Arbeitens in den Grundlagen anwenden und einen kurzen fachspezifischen Text verfassen.

Ergänzend zum Modul "Einführung in die Archäologien" wird in diesem Kurs die prähistorische Archäologie vertieft behandelt. Dabei werden die prähistorischen Epochen vorgestellt und die wichtigsten Quellenkategorien der jeweiligen Epochen behandelt. Der Fokus der Veranstaltung liegt auf den Fundstellen der Schweiz und des europäischen Umlands. Zentrale Aspekte werden aber auch in einem erweiterten geographischen Umfeld erläutert. Die chronologische und räumliche Aufteilung der prähistorischen Funde wird erläutert und kritisch reflektiert. Abgrenzungen, Merkmale und kulturgeschichtliche Fixpunkte werden behandelt und diskutiert. Der Umgang mit den prähistorischen Quellen, deren Entdeckung, Ausgrabung, Dokumentation und wissenschaftliche Bearbeitung werden vorgestellt.

ECTS: 6

Learning Outcome:

Die Studierenden kennen die prähistorischen Perioden, deren Einteilung und die dazu gehörenden Quellengattungen. Sie kennen die wichtigsten Fundstellen und Quellen und deren räumliche und chronologische Verbreitung. Sie kennen vergangene und aktuelle Konzepte zur Gliederung der prähistorischen Epochen und Räume, und können diese einordnen und kritisch hinterfragen. Die Studierenden haben einen ersten Einblick in den Umgang mit prähistorischen Quellen von der Grabung bis zur wissenschaftlichen Bearbeitung.

Module Cultural-historical contexts in Prehistoric Archaeology

06SM682-010 / Module

Description:

General description:

Gegenstand des Moduls sind gesellschaftliche Phänomene der unterschiedlichen prähistorischen Epochen. Die Hauptkategorien der Quellengattungen der prähistorischen Archäologie, nämlich Siedlungen, Gräber, Horte und Kultstätten ermöglichen argumentierte Aussagen über die Gesellschaft. Es gilt, anhand von konkreten Beispielen (Funde, Befunde, Kontexte, Landschaften) Elemente des sozialen, ökonomischen oder religiösen Lebens zu erarbeiten. Das Verständnis eines bestimmten kulturellen Aspekts und dessen Interaktionen steht im Vordergrund.

ECTS: 6

Learning Outcome:

Die Studierenden lernen, sich mit einem vorgegebenen Thema auseinanderzusetzen und können es sowohl mündlich als auch schriftlich reflektiert darstellen. Zu dem zu erarbeiteten Thema formulieren sie selbständig Fragestellungen. Sie können eigenständig Literatur zu einem Thema recherchieren und nach den vom Institut festgelegten Regeln zitieren. Inhaltlich lernen die Studierenden den Umgang mit archäologischen Fundsituationen und Interpretationen sowie deren reflektierte und quellenkritische Betrachtung.

Module Cultural-historical contexts in Greek Archaeology

06SM682-011 / Module

Description:

General description:

Die Veranstaltung beschäftigt sich in vertiefender Weise mit ausgewählten Fragestellungen und Themen - seien es Kontexte, Denkmäler, Orte, Rituale oder Prozesse - auf dem Gebiet der griechischen Archäologie. Themen und Fragestellungen werden dabei von verschiedenen Seiten beleuchtet und in einen breiteren kulturhistorischen Zusammenhang gestellt und in Form von selbständigen Arbeiten (Referaten und schriftlichen Arbeiten) sowie gemeinsamen Diskussionen erschlossen. Die Studierenden erwerben so grundlegende Fach- und Medienkompetenz zur Bearbeitung und Vermittlung eines wissenschaftlichen Themengebietes.

ECTS: 6

Learning Outcome:

Die Studierenden bearbeiten eng umrissene Fragestellungen innerhalb eines grösseren ausgewählten Themas der griechischen Archäologie und wenden dabei selbstständige wissenschaftliche Arbeitsmethoden (Quellenrecherche, archäologische Methoden der Fundansprache und Datierung, kritische Verarbeitung der Forschungsliteratur) an. Sie sind in der Lage, ihre Ergebnisse klar und konzip zu referieren sowie eigene Gedanken und Ideen zum Thema zu entwickeln. In einer gemeinsamen Diskussion mit den Mitstudenten stellen sie ihre Ergebnisse in einen grösseren Rahmen. Die Verschriftlichung versetzt die Studierenden in die Lage, kurze wissenschaftliche Texte zu verfassen.

Module Object determination in Classical Archaeology

06SM682-013 / Module

Description:

General description:

Themen der Veranstaltung sind nach einer kurzen Einführung das genaue Betrachten, das Beschreiben und das archäologische Bestimmen (Einordnung und evtl. Zuschreibung, Deutung, Datierung) antiker Objekte anhand von ausgewählten Werken aus der Archäologischen Sammlung der Universität Zürich. Die genaue Beobachtung und knappe, aber präzise Beschreibung sowie die typologische, geographische und chronologische Einordnung antiker Denkmäler aus unterschiedlichen Materialien und in verschiedenen Formen sowie Formaten zählt zu den zentralen Aufgaben und Arbeiten in der Archäologie, auf Ausgrabungen wie im Museum. Es geht in der Veranstaltung in erster Linie um die notwendige erste Bestimmung beim Inventarisieren, nicht um eine vollständige wissenschaftliche Bearbeitung der Objekte.

ECTS: 3

Notes:

Das Modul wird nach Abschluss der Studieneingangsphase empfohlen.

Learning Outcome:

Die Studierenden kennen die Grundlagen der Bestimmung archäologischer Funde und haben einen Überblick über die für die Arbeit mit den häufigsten Materialgattungen (Keramik, Bronze, Terrakotta, Stein) massgebliche Literatur. Sie können ausgewählte antike Funde nach deren eingehender Betrachtung in selbständiger Weise einordnen und eine bestimmte Anzahl an Objekten nach vorgegebenen Kriterien beschreiben.

Module Introduction to German Linguistics A

06SM360-101 / Module

Description:

General description:

Das Modul bietet im Rahmen einer Vorlesung und eines begleitenden Seminars eine Einführung in sprachsystematische Aspekte des Deutschen und seiner historischen Entwicklung sowie in grundlegende linguistische Analysekonzepte und Arbeitstechniken. Die Studierenden erhalten einen Überblick über phonologische, morphologische und syntaktische Merkmale der Gegenwartssprache und ihrer Varietäten sowie über phonologische, morphologische und syntaktische Veränderungen in der älteren Sprachgeschichte von den indogermanischen Ursprüngen bis zum Spätmittelalter. Die Phänomene werden auf grössere, d.h. zeichen-, grammatik- und sprachwandeltheoretische Erklärungskontexte bezogen, und es werden aktuelle Forschungs- und Anwendungsperspektiven diskutiert. Innerhalb des Moduls betreuen sowohl die Vorlesung wie auch das Seminar synchrone und diachrone Inhalte der germanistischen Linguistik, wobei im Seminar die Themen der Vorlesung vertieft, erweitert und ergänzt werden.

ECTS: 6

Notes:

Die Vorlesung des Moduls wird in Präsenz durchgeführt und aufgezeichnet. Die Seminare finden präsentisch statt, ein Seminar wird remote angeboten: Gruppe 5, Montag 12:15-13:45.

Learning Outcome:

Die Studierenden verfügen über Phänomenkenntnisse zur Struktur der deutschen Sprache und ihrer historischen Entwicklung sowie über methodische und theoretische Kenntnisse der synchronen und diachronen Sprachwissenschaft. Sie sind vertraut mit den strukturellen Grundzügen der Gegenwartssprache und ihrer Varietäten sowie mit den wichtigsten Entwicklungen der älteren Sprachgeschichte des Deutschen. Sie haben einen Überblick über linguistische Analysekonzepte auf verschiedenen Ebenen des Sprachsystems (zeichentheoretische Grundlagen, Phonetik/Phonologie, Morphologie, Syntax) unter synchroner und diachroner Perspektive. Sie können gegenwartssprachliche und sprachgeschichtliche Phänomene aufeinander beziehen und diese in grösseren grammatik- und sprachwandeltheoretischen Kontexten verorten.

Module Introduction to Modern German Literature

06SM360-104 / Module

Description:

General description:

Das Einführungsmodul, bestehend aus einer Vorlesung und einem Seminar, hat die Grundlagen der modernen Literaturwissenschaft zum Gegenstand: Ausgehend von der Frage, was sprachliche "Zeichen" sind und wie diese einen "Text" bilden, wird ein erstes Modell von "Literatur" bzw. von "Poetik" erarbeitet. Im Zentrum stehen folgende Fragen: Was kennzeichnet literarische Texte insgesamt und welche wissenschaftlichen Zugangsformen ergeben sich hieraus? Gibt es sprachgebundene, formale oder funktionale Kriterien von literarischen Texten, die uns Anleitungen zum wissenschaftlichen Umgang mit ihnen liefern können? Wie unterscheiden und differenzieren sich diese Kriterien von Literarizität, wenn wir sie auf einzelne Gattungen beziehen: Was also unterscheidet in textanalytischer Hinsicht Lyrik, Dramatik und Erzählliteratur, und mit welchen spezifischen Fragestellungen nähert sich Literaturwissenschaft diesen Gattungen? Teil des Workloads ist ein Bibliotheksparcours und eine schriftliche Übung.

ECTS: 9

Notes:

Die Vorlesung des Moduls wird in Präsenz durchgeführt und aufgezeichnet (Podcast).

Learning Outcome:

Das erfolgreich absolvierte Modul befähigt die Studierenden, literarische Texte gattungstheoretisch zuzuordnen und sie als an Zeichen gebundene Konstruktionen zu verstehen. Das Modul vermittelt ein erstes Modell zur Charakterisierung literarischer Texte und es schafft die Basis zur literaturwissenschaftlichen Textanalyse aufgrund unterschiedlicher methodischer Ansätze. Die Grundlagen der modernen Zeichentheorie und der auf ihr aufbauenden literarischen Gattungs- und Medientheorie sind in einem Grad erschlossen, der es ermöglicht, erste praktische Erfahrungen im textanalytischen Umgang mit Literatur zu sammeln.

06SM360-106 / Module

Description:

General description:

Das Modul bietet eine Vertiefung in ausgewählte Konzepte der historischen Sprachwissenschaft sowie in die Sprach- und Kommunikationsgeschichte des Deutschen. Der Fokus liegt dabei auf einer intensiven Auseinandersetzung mit Theorien und Fragestellungen, die sich mit der Beschreibung und Analyse historischer Sprachdaten sowie verschiedener historischer Sprachstufen des Deutschen, seiner Varietäten und seiner germanischen Nachbarsprachen beschäftigen. Im Vordergrund steht die Vermittlung von Methoden und grundlegenden Kenntnissen im Erstellen, Auswerten und Beurteilen von historischen Sprachkorpora.

ECTS: 6

Learning Outcome:

Die Studierenden können grundlegende Konzepte der germanistischen diachronen Sprachwissenschaft selbstständig darstellen und theoretische und methodische Aspekte der historischen Sprachwissenschaft exemplarisch anwenden und in Bezug auf ausgewählte Fragestellungen bearbeiten. Sie verfügen über die linguistischen Instrumente, um sich mit historischen Sprachepochen eigenständig auseinanderzusetzen und historische Sprach-gebräuche in ihrem Bezug zu sozial- und kulturgeschichtlichen Entwicklungen zu verstehen. Sie verfügen über Grundkenntnisse bezüglich der Überlieferung und quellen-kritischen Einschätzung historischer Sprachdaten.

Module German Literary Studies: Methods and Theories

06SM360-112 / Module

Description:

General description:

Literaturtheorie wird nicht umstandslos auf literarische Texte angewendet, sondern bedarf einer vermittelnden Operationalisierung. Die Analyse historisch situierter literarischer Texte basiert auf systematischem Wissen. Mit seinen beiden Lehrformen operiert das Modul ebenso generalistisch wie exemplarisch.

Zunächst wird in der Vorlesung in die etablierten Literaturtheorien eingeführt.

Die Theorien umfassen Hermeneutik, Strukturalismus und Poststrukturalismus genauso wie Intertextualität, Intermedialität und Interkulturalität. Ausserdem markiert das Modul interdisziplinäre Schnittstellen, die literaturtheoretisch fruchtbar gemacht wurden (u.a. Philosophie, Psychoanalyse, Politikwissenschaft, Soziologie, Gender- und Queer Studies). Das Modul verbindet diese Grundlagen mit der Frage nach dem Verhältnis von Theorie und Analyse, das jeweils in einem Seminar in der eigenständigen Analyse kritisch reflektiert wird. Teil des Workloads sind ein oder mehrere Inputs mit Handout.

ECTS: 9

Learning Outcome:

In diesem Modul werden die Studierenden mit Grundlagen der Literaturtheorie vertraut gemacht. Neben einem Überblick über die wichtigsten Theorien werden sie für das Verhältnis von Theorie und Analyse sensibilisiert. Sie können literaturtheoretische Fragestellungen operationalisieren und auf dieser Basis die literaturtheoretischen Prämissen von Forschungsliteratur überprüfen und einordnen. Das Modul bereitet die Studierenden damit auf die - insbesondere schriftliche - Formulierung eigener, methodologisch reflektierter Forschungsansätze vor, die systematisch begründet sind. Ein Schwerpunkt des Moduls liegt in der theoretisch informierten Interpretation historisch situierter literarischer Texte.

Module Medieval and Early Modern German Literature - Basics and Methods

06SM360-109 / Module

Description:

General description:

Das Modul dient, ausgehend von der Arbeit an einem mittelhochdeutschen Text oder einem Textcorpus, der Vermittlung der Fähigkeit, sich eigenständig, methodisch reflektiert und unter Nutzung der einschlägigen Hilfsmittel mit einem mittelalterlichen Text auseinandersetzen zu können. Die philologischen Arbeitstechniken (Recherche, Auseinandersetzung mit der Forschung, Thesenbildung) werden eingeübt.

ECTS: 6

Learning Outcome:

Die Studierenden kennen die Herausforderungen, die sich aus den mittelalterlichen Überlieferungssituationen ergeben (Handschriftenkunde; 'mouvance'; Editionsphilologie). Die daraus resultierenden Konsequenzen für literaturwissenschaftliche Kernkonzepte (v. a. Literatur-, Text-, Autorbegriff) können sie fallbezogen differenzieren und Fachterminologie sicher anwenden; dies schliesst, ausgehend von Grundfragen von Hermeneutik und Interpretation, die Auseinandersetzung mit historischer Narratologie, Formanalyse und Semantik ein. Die Studierenden können die historischen Voraussetzungen der Textproduktion und -rezeption (Rhetorik/Allegorese/ Exegese; Gesellschaftsstruktur) in ihre Deutungspraxis integrieren und die mittelhochdeutschen Texte mit Blick auf die ihnen vorausgehenden und sie umgebenden vernakulären und lateinischen Traditionen in ihrer Spezifik beschreiben.

Module Literature in Switzerland

06SM360-113 / Module

Description:

General description:

Das Modul bietet eine differenzierte Auseinandersetzung mit dem literarischen Feld 'Schweiz' und macht es als Diskursraum mit expliziten und impliziten Voraussetzungen, Geltungen und Wirkungen verstehbar. Literarische Texte und Institutionen der Literatur werden auf ihre Situierung in diesem multidimensionalen und mehrsprachigen Diskursraum hin und in ihrer komplexen Verwobenheit mit anderen Kulturräumen analysiert. Die Parameter der Analyse umfassen

u.a. sprachliche, regionale, nationale, identitätspolitische, historische, imaginäre Zuschreibungen und Grenzziehungen. Themenfelder einer vertieften Analyse sind: historische wie zeitgenössische 'Schweizer' Texte und Institutionen, regionale wie supranationale Literaturen und reale Schweizer Orte ebenso wie die imaginierte Schweiz. Die thematische Auseinandersetzung erfolgt nach Möglichkeit unter Einbezug literarischer Praxisfelder

ECTS: 9

Learning Outcome:

Die Studierenden verstehen 'Schweiz' und 'das Schweizerische' als Diskurs- und Reflexionsraum und können literarische Ausdrucksformen und Institutionen dazu in Beziehung setzen. Sie kennen zentrale Kategorien, die für die Analyse des Literaturfeldes Schweiz im Kontext der neueren deutschen Literatur relevant sind, können diese kritisch reflektieren, in ihre jeweiligen sozialhistorischen Kontexte einordnen und für konkrete Text- und Kontextanalysen anwenden. Ausgehend von einem Ausschnitt aus der Literaturgeschichte und/oder der literarischen Gegenwart des Literaturfeldes Schweiz verfügen sie über vertiefte Kenntnisse, die sie sich allenfalls auch im Rahmen einer praktischen Übung angeeignet haben. Auf einer grundsätzlicheren Ebene geht es darum, Zuschreibungen bewusst zu machen, kritisch zu reflektieren und informiert anzuwenden.

Module History of the Scandinavian Languages

06SM360-203 / Module

Description:

General description:

Das Modul besitzt zwei Schwerpunkte: Im ersten Modulteil steht die Lektüre- und Übersetzungskompetenz des Altnordischen im Zentrum. Er stellt somit auch eine Einführung in das Altnordische dar und soll dazu befähigen, einen einfachen Prosatext in altnordischer Sprache zu verstehen. Anhand intensiver Lektüre soll ein Überblick über die Grammatik des Altnordischen gewonnen werden. Ebenso wird das Arbeiten mit einschlägigen Hilfsmitteln eingeübt. Die Lektüre bildet zudem eine Grundlage für die weitere Beschäftigung mit altnordischen Textzeugnissen. Der zweite Modulteil führt in die Geschichte der skandinavischen Sprachen ein. Vermittelt wird hier ein Überblick über die Geschichte der skandinavischen Sprachen von den ersten Runeninschriften bis in die Moderne. Von besonderem Interesse sind interne und externe Faktoren des Sprachwandels. In diesem Modulteil lernen die Studierenden die Terminologie und Methoden der diachronen Linguistik auf die skandinavischen Sprachen anzuwenden.

ECTS: 6

Learning Outcome:

Die Studierenden kennen Grundzüge der skandinavischen Sprachgeschichte von den Anfängen bis zur Gegenwart. Sie sind in der Lage, den Sprachwandel im Rahmen der Entstehung der modernen Standardsprachen Skandinaviens historisch zu verstehen, zu beschreiben und zu erklären. Sie besitzen zudem basale Lektüre- und Übersetzungskompetenz im Altnordischen.

Module Rhetoric - Poetics - Performance

06SM360-515 / Module

Description:

General description:

Mittels Sprache beziehen wir uns auf die uns umgebende Welt, wir drücken unsere Gedanken oder Gefühle aus. Darüber hinaus ist Sprache jedoch vielfältig in Handlungszusammenhänge eingebettet. In der linguistischen Sprechakttheorie wird Sprache deshalb in ihren Handlungsformen theoretisch reflektiert. Aus diesem Zusammenhang stammt der Begriff der Performativität, der in den Literatur-, Kultur- und Medientheorien seit den 1960er Jahren eine wichtige Rolle spielt. Die Performativität der Literatur bezieht sich einerseits auf die Möglichkeiten, mit Literatur zu handeln, um in die Welt moralisch oder politisch motiviert einzugreifen: Literatur inszeniert, imitiert oder simuliert Wirklichkeit und reizt dadurch zu Kritik und Veränderung an. Die Performativität der Literatur bezieht sich andererseits aber auch auf das epistemologische Potenzial der Literatur selbst. In diesem komplexeren Verständnis steht zur Diskussion, dass Literatur die Welt nicht abbildet, sondern erzeugt. Dieses Wissen unterscheidet sich vom faktenbasierten (propositionalen) Wissen über die Welt, weil es von Wahrnehmung, Körper, Tradition u.a. abhängt. Nicht zuletzt definiert das Modul deshalb auch die Schnittstelle zu anderen Medien der Aufführung, z.B. Theater, Oper oder anderen Formen der Performance.

ECTS: 15

Learning Outcome:

Das Ziel des Moduls besteht darin, performative Formen in verschiedenen literarischen Gattungen und kulturellen Handlungszusammenhängen zu analysieren. Rhetorik und Poetik bilden das Fundament für die modernen Literatur- und Kulturtheorien. Im Zentrum der Rhetorik stehen die performativen Figuren, wie z.B. das Fragen und Zweifeln, aber auch solche Figuren, die stärker affektiv grundiert sind, z.B. das Ausrufen oder Anrufen, und nicht zuletzt auch ethische Konzepte, wie z.B. Fürsprache oder Redefreiheit. Die Poetik ergänzt und vertieft die Rhetorik um zwei Dimensionen der Performativität: einerseits reflektiert sie die bildlichen Verfahren der Veranschaulichung, wie z.B. der Metapher, andererseits die akustischen Verfahren der Verlebendigung, wie z.B. Metrum und Rhythmus.

Module German Literatures in European Context

06SM360-516 / Module

Description:

General description:

Die Geschichte der deutschsprachigen Literaturen ist immer der Dynamik eines europäischen Diskurses ausgesetzt gewesen. Konzipiert ist dieser Diskurs einerseits als Narrativ eines Sprachen und Kulturen übergreifenden Traditionszusammenhangs, andererseits als Kontinuum wechselseitiger poetologischer Beeinflussung und Kommentierung. Das Modul will beide Diskursstränge kritisch durchleuchten. Auf literarhistorischer Ebene nimmt es gezielt Rezeptions- und Transformationsprozesse zwischen den Literaturen in den Blick, widmet sich sowohl den poetischen Brechungen der antiken Mythologie als auch gesamteuropäischen Kulturformationen - von der Galanterie über die Décadence bis zum Punk. Auf systematischer Ebene hingegen vertieft das Modul Theorie und Phänomenalität von Intertexten sowie das Verständnis interkultureller Praktiken, zu denen nicht zuletzt auch das literarische Übersetzen zu zählen ist. Teil des Workloads sind ein oder mehrere Inputs mit Handout.

ECTS: 15

Learning Outcome:

Das Modul verbindet sich mit drei Lernzielen. Zum Ersten lernen die Studierenden, die deutschsprachigen Literaturen innerhalb der Konstellationen der europäischen Ideen- und Literaturgeschichte neu zu verorten. Diese Verortung kann sowohl in einer diachronen wie in einer synchronen Perspektive erfolgen und vollzieht sich im Rahmen einer Vertiefung der im Ba-Studium bereits erlangten Kenntnisse aus dem Bereichen der Stoffgeschichte, der Intertextualitäts- wie Interkulturalitätstheorie. Zum Zweiten wird den Studierenden ein Grundverständnis der sich zwischen den Sprachen ereignenden literarischen Prozesse, der wechselseitigen Vermittlung, einschliesslich der literarischen Übersetzung vermittelt. Zum Dritten sollen die Studierenden im Rahmen des Moduls auch ein kritisches Verständnis des Europa-Diskurses und der mit ihm verbundenen räumlichen, kulturellen und politischen Narrative erwerben.

Module Literature and Culture

06SM360-518 / Module

Description:

General description:

Im Modul wird die deutsche Literatur seit 1700 im kulturellen und sozialen Kontext und mit Blick auf epochenübergreifende Problemstellungen untersucht. Grundlegend ist die Annahme, dass der eigenständige Standpunkt der Literatur als Medium der kulturellen Selbstreflexion erst in der komplexen Verflechtung mit außerliterarischen Diskursen an Profil gewinnt. Mit Blick auf aktuelle kulturwissenschaftliche Erweiterungen des Faches legt das Modul den Schwerpunkt auf die Analyse von Literatur in der Auseinandersetzung mit anderen Diskursen wie Anthropologie, Recht, Politik, Philosophie, Naturwissenschaft u.a. Der spezifische Ort der Literatur steht dabei ebenso im Zentrum des Interesses wie ihre historische Stellung unter dem Aspekt des medialen Wandels und im Kontext gesellschaftlicher Ordnungen. Vertieft werden einschlägige Theoriefelder wie Wissenspoetik, literarische Anthropologie, politische Theorie, Diskursanalyse u.a. Teil der Workloads sind ein oder mehrere Inputs mit Handout.

ECTS: 15

Learning Outcome:

Die Studierenden können die deutsche Literatur seit 1700 im kulturellen und sozialen Kontext sowie im Zusammenhang anderer kultureller Praktiken und Wissensfelder reflektieren und analysieren. Auf der Grundlage einer kulturwissenschaftlichen Erweiterung des Literatur- und Textbegriffs schärft das Modul das Verständnis für das wechselseitige Reflexionsverhältnis von Literatur und Kultur. Die Studierenden lernen, literarische Verfahren und Strukturen auch in außerliterarischen Diskursen zu erkennen. Solcherart fördert das Modul das interdisziplinäre Denken und das fächerübergreifende Studium. Die Studierenden vertiefen zudem ihre Kenntnisse im Bereich aktueller literatur- und kulturtheoretischer Ansätze wie literarische Anthropologie, Diskursanalyse, Wissensgeschichte, Medientheorie/Intermedialität, Material Studies u.ä.

Module Current Topics in Scandinavian Studies

06SM360-602 / Module

Description:

General description:

In diesem Modul soll eine vertiefte Übersicht über aktuelle Entwicklungen und Diskurse im Fach Skandinavistik erarbeitet werden. Ein zweiter Schwerpunkt stellt die Vermittlung skandinavistischer Forschung und der skandinavischen Literaturen und Kulturen an ein ausseruniversitäres Publikum dar. Hierfür werden mittels Praxiserfahrung (z.B. im Literaturhaus, Museums- oder Bibliotheksbereich) entsprechende Möglichkeiten geschaffen. Eine Leseliste mit relevanter Primär- und Sekundärliteratur ergänzt die beiden Seminare. Das Modul wird mit einem strukturierten Portfolio abgeschlossen.

ECTS: 15

Learning Outcome:

Die Studierenden können Fachinhalte im Bereich der Literatur- und Kulturtheorie selbstständig und lösungsorientiert auf neue Themen und Aufgabenstellungen übertragen und skandinavische Texte mit den für die gewählten Teilfächer relevanten Methoden erforschen. Sie besitzen zudem die kommunikative Kompetenz, ihr Wissen und Verstehen verschiedenen Zielgruppen mündlich und schriftlich zu vermitteln und haben bei ersten praktischen Erfahrungen unter Beweis gestellt, dass sie ihre erworbenen Fähigkeiten von der Forschungs- auf die Praxisebene und umgekehrt übertragen können. Sie sind auf der Basis ihrer Kenntnisse in der Lage, Sachverhalte der skandinavischen Literaturen auch ausseruniversitär zu vermitteln und Aufgaben in Praxis- und Anwendungszusammenhängen (z. B. Bibliotheken, Museen, Ausstellungen) zu übernehmen.

Module Theory/Analysis

06SM360-530 / Module

Description:

General description:

Das Modulelement "Theorie" verschafft den Überblick im Feld der relevanten Kultur-/Literaturtheorien mit einem spezifischen Fokus auf deren Gegenwartsbezug einerseits, der gesellschaftlich/politischen Dimension andererseits. Dies schliesst auch die Basislegung im Bereich des kulturtheoretischen Kanons sowie dessen Aktualisierung ein.

Profilbildend und zentral positioniert im Pflichtmodul ist dabei die Leitfrage, wie die unterschiedlichen theoretischen Verfahren der "Lesbarmachung" von Welt als Kultur ihrerseits in theoriebasierte analytische Lektüren aktueller literarischer und literaturanaloger (Alltags)Kulturphänomene überführt werden können. Im Modulelement "Analyse" geht es darum, Theorie einerseits als interdependent mit der sie referentiell begründenden Kultur und Gesellschaft zu verstehen.

Andererseits wird der so gewonnene "theoretische Blick" zum Medium der Vermittlung akademischer Sichtweisen auf literarische und literaturähnliche Gegenwertsphänomene.

ECTS: 15

Learning Outcome:

Die Studierenden gewinnen im Modulelement "Theorie" einen Überblick über die für literaturwissenschaftliche Aktualität spezifisch relevanten Theorieansätze aus dem Bereich der Kultur- und der damit interferierenden Literaturtheorie. Der Lehr-/Lernfokus liegt dabei auf der Diskussion aktueller Forschungsansätze und Fragestellungen mit profilierter gesellschaftlicher/ politischer Dimension und Gegenwartsbezug (wie Posthumanismus, Postcolonial studies, Ecocriticism und Systemkritik). Im Modulelement "Analyse" werden hingegen Verfahren erlernt und praktisch geübt, die unterschiedliche theoretische Perspektiven mit Aktualitätsbezug am literarischen Gegenstand selber entwickeln bzw. durch diesen kritisch reflektieren. Ein zentrales Lernziel bildet dabei die Kompetenz eines gegenstandsbezogenen Theorietransfers, d.i. des theoriebasierten "literarischen Verstehens" von Gegenwertskultur.

Module Teaching Literature

06SM360-531 / Module

Description:

General description:

Das Modul konkretisiert im Rahmen eines Semesterthemas exemplarisch, wie literaturwissenschaftliche Theoriebildung dynamische und unabgeschlossene Wissensprozesse abbildet. So wird einerseits den Studierenden der Konstruktionsprozess von literaturtheoretischem Wissen selbst einsichtig, während andererseits über das plattformeigene Forum sich die Studierenden Nachfragen und Diskussionen stellen bzw. diese moderieren. Dabei wird dem Aspekt der Vermittlung höchste epistemologische Priorität beigemessen: Es geht nicht nur darum, wissenschaftlich einwandfrei gesichertes Wissen über Literatur öffentlich zugänglich zu machen, sondern ebenso darum, dieses Wissen in einer technisch und didaktisch zukunftsfähigen Weise zu vermitteln. Literatur per se ist immer schon auf Kommunikation basiert: Das Modul zeigt folglich nicht bloss Wege auf, Erkenntnisse 'über' Literatur didaktisch aufzubereiten, sondern reflektiert Vermittlung selber als literaturwissenschaftliches Forschungsparadigma.

ECTS: 15

Learning Outcome:

Im Zentrum steht die Vermittlungspraxis von Literaturwissenschaft.

Lernziel: Die Studierenden werden aktiv und eigenverantwortlich in die Produktion von wissenschaftliches Wissen vermittelnden Online-Kursen und Videolektionen, sowie die Interaktion im Online-Forum eingeführt. Die Einarbeitung in ein spezifisches literaturwissenschaftliches Themenfeld wird ergänzt durch die didaktische Reflexion und die technische Umsetzung dieser Reflexion. Erlernt werden die didaktische Konzeption audiovisueller und digitaler Lehre, das Erstellen von Skripten und das Realisieren eines audiovisuellen Vermittlungsmoduls. Die Studierenden lernen: In Teams zu arbeiten und ihre Arbeitsdisposition selbst zu konzipieren; ein wissenschaftliches Einzelfeld zu erschliessen und zugleich die Herausforderung der Vermittlung dieses Feldes für eine Open Education Ressource anzunehmen; mit einem Vermittlungsmodul und dessen praktischer Erprobung eine zentrale Kompetenz im Feld der Wissenschaftsvermittlung auszuüben.

Module Cultural Theory Basics (Seminar)

06SM360-802 / Module

Description:

General description:

Das Pflichtmodul "Kulturtheoretische Grundlagen" führt in zentrale Begriffe, Theorien und Methoden ein, die zur Praxis der Kulturanalyse befähigen. Dabei sollen sowohl die historischen Voraussetzungen als auch die kulturellen und disziplinären Kontexte von Theoriebildung und Theorietransfer vermittelt werden. Die vielfältigen Konzepte, Theoreme und Forschungsstrategien, die gerade in ihrer Vielfalt für die Kulturanalyse von Interesse sind, werden so auf ihre analytische Tauglichkeit und auf ihre aktuelle Verwendbarkeit geprüft.

Bestandteil des Seminars ist eine mündliche Prüfung über ausgewählte Grundlagentexte der Kulturanalyse sowie eine schriftliche Arbeit in Form eines Essays von maximal 8 Seiten.

ECTS: 9

Learning Outcome:

Die Studierenden eignen sich zentrale Begriffe, Theorien und Methoden der Kulturanalyse an, die für das Lesen, Analysieren, Reflektieren, Problematisieren, Kritisieren, interdisziplinäre, intermediale und interkulturelle Erforschen von Kultur in all ihren Erscheinungsformen und Zusammenhängen erforderlich sind. Insbesondere erhalten die Studierenden ein analytisches Instrumentarium, das es ihnen erlaubt, am Leitfaden der Auseinandersetzung mit Kultur disziplinäre Wissens- und Methodenbildungen kritisch zu reflektieren, diese auf ihre "blinden Flecken" hin zu befragen und interdisziplinär bzw. intermedial zu erweitern.

Module Culture Analysis Now!

06SM360-801 / Module

Description:

General description:

Das Modul bietet eine Einführung in die Praxis der Gegenwartsanalyse in Form einer Ringvorlesung an. Die Beiträge fokussieren auf die Jetztzeit, analysieren kulturelle Zeitphänomene oder Ereignisse aus Politik und Gesellschaft, praktizieren, was Hegel als die "Zeit in Gedanken erfasst" bezeichnet hat.

Leitfragen in dieser Zuwendung zur Gegenwart sind: Wie und mit welchen Mitteln kann Gegenwart erfasst werden? Welche Techniken und Konzepte liefern die unterschiedlichen Disziplinen für die Gegenwartsanalyse? Welche Geschichte hat sie? Die Beiträge beantworten diese Fragen exemplarisch und von den vielfältigen disziplinären Standpunkten her, die für die Kulturanalyse von Interesse sind. Dadurch eröffnen sich einerseits Perspektiven, die helfen, sich in der Gegenwart zu orientieren. Andererseits wird der Praxis der Gegenwartsanalyse ein Schauplatz gegeben, der die Studierenden dazu einlädt, selbstständig diese Praxis zu wagen, nicht zuletzt sich als Intellektuelle zu positionieren.

ECTS: 3

Learning Outcome:

Die Studierenden eignen sich kulturalanalytische Kernkompetenzen in Form der Praxis der Gegenwartsanalyse an, um aktuelle kulturelle Phänomene und Vorgänge in all ihren Erscheinungsformen lesen, analysieren, reflektieren, problematisieren und kritisieren sowie eigenständig interdisziplinär bzw. intermedial erforschen zu können.

Module Latin Translation Skills

06SM323-008 / Module

Description:

General description:

In der schriftlichen Prüfung zu diesem Modul ist ein vorher nicht gelesener Originaltext von mittlerer Schwierigkeit in korrektes Deutsch (oder eine andere Landessprache) zu übersetzen. Die Übersetzung muss ohne Zuhilfenahme des Originals verständlich sein und erkennen lassen, dass sowohl der Gedankengang des Textes als auch seine Konstruktionen verstanden wurden. Vorausgesetzt werden erstens die Grammatik von Rubenbauer/Hofmann und der Wortschatz von Vischer. Zweitens ist die Übersetzungskompetenz durch eine intensive Lektüre von Primärtexten zu erwerben. Bei der Auswahl können individuelle Interessen berücksichtigt werden, wobei die Wegleitung Empfehlungen zu den Texten sowie Richtlinien zum Umfang enthält. Für die Interpretationsfragen in der schriftlichen und in der mündlichen Prüfung werden drittens die bereits absolvierten Module sowie das Studium einer Literaturgeschichte vorausgesetzt. Im Akzess werden die nötigen Kenntnisse für den Besuch von Seminar-Modulen erworben.

Module Introductory Course: General and Comparative Literature

06SM504-001 / Module

Description:

General description:

Das Modul richtet sich an Studienanfängerinnen und -anfänger und bietet eine grundlegende Einführung in die Allgemeine und Vergleichende Literaturwissenschaft. Im Zentrum stehen die gemeinsame Lektüre und intensive Diskussion konkreter Primärtexte (Close Reading): von der Antike bis zu digitalen Schreibprojekten des 21. Jahrhunderts. Dazu werden begleitend Grundfragen der Literaturtheorie und Poetik diskutiert (Was ist Literatur?) sowie elementare Formen von Text-Text- sowie von Text-Kontext-Beziehungen erörtert (literarische Übersetzungen, Beziehungen der Literatur zu anderen Künsten, Medien, Wissensgebieten und kulturellen Bezugsfeldern). Darüber hinaus werden Grundbegriffe sowie basale Techniken des literaturwissenschaftlichen Arbeitens eingeübt (Textanalyse, Entwickeln einer Fragestellung, Strukturieren einer wissenschaftlichen Arbeit, Recherchieren, Argumentieren, Zitieren, Bibliografieren etc.).

ECTS: 6

Notes:

Das Basisseminar richtet sich insbesondere an alle AVL-Studierenden im ersten (oder allenfalls zweiten) Semester.

Learning Outcome:

Erwerb praktischer und systematischer Grundkenntnisse der Allgemeinen und Vergleichenden Literaturwissenschaft. Wer das Modul besteht, ist für den weiteren Verlauf des Ba-Studiums darauf vorbereitet, innerhalb eines vorgegebenen Rahmens eine literaturwissenschaftliche Fragestellung zu entwickeln, zu recherchieren und schliesslich eine erste wissenschaftliche Arbeit zu verfassen.

Module Reading Practice

06SM504-002 / Module

Description:

General description:

Mithilfe einer Leseliste werden im Selbststudium grundlegende literarische und theoretische Texte gelesen. Einen elektronischen Zugang zur Leseliste sowie zu den Texten selbst erhalten Sie durch alle Lehrenden der AVL. Die Liste dient der Einübung in die Lesepraxis und gleichzeitig der Erweiterung des Lektürehorizonts mit Blick auf Texte, die im Studium von wiederkehrendem Interesse sind. Die Textauswahl motiviert dazu, in Form von Stichproben eine handhabbare Vielfalt literarischer Texte aus unterschiedlichen Sprachräumen, historischen Epochen und Gattungen bzw. Formen kennenzulernen. Zum anderen hält sie dazu an, sich mit grundlegenden Texten und Überlegungen aus dem Bereich der Poetik und Literaturtheorie auseinanderzusetzen. Dabei soll die Leseliste explizit auch dazu anregen, eigene Antworten auf die Frage nach den möglichen Kriterien eines Ein- oder Ausschlusses bestimmter Texte aus einem 'Kanon' - wie demjenigen einer Leseliste - zu formulieren.

ECTS: 6

Learning Outcome:

Die Studierenden kennen einen Kanon aus AVL-relevanten Texten sowie die Problematik der Kanonbildung.

06SM390-002 / Module

Description:

General description:

Ce module est constitué d'un cours magistral accompagné de travaux dirigés (Ue), deux composantes qui se complètent mutuellement et qui ont lieu pendant le même semestre. Module The Dragon and the Grail: Discovering Medieval French Literature

06SM390-004 / Module

Description:

General description:

Ce module est constitué d'un séminaire (SE) accompagné de travaux dirigés (UE), deux composantes qui se complètent mutuellement et qui ont lieu pendant le même semestre. Le séminaire, dirigé en principe par un professeur, veut présenter une première approche des textes, scènes et motifs les plus célèbres de la littérature française du Moyen Âge : la légende du roi Arthur, avec le Graal, la Table Ronde et les fées, le bestiaire médiéval avec ses dragons et monstres, le Roman de la Rose et la Belle Dame sans Merci, qui ont fourni à l'Europe l'image de la femme idéale et fatale, Marco Polo et les récits de voyage, les visions de l'Autre Monde vécus par les saints etc. On lira aussi des textes qui nous révèlent des aspects de la vie quotidienne : des recettes de cuisine, des livres de divination ou des textes qui permettent de prédire le temps. Dans le cadre des travaux dirigés (UE), assurés généralement par une assistante ou un assistant, les étudiantes et les étudiants approfondissent par des lectures et exercices personnels certains aspects développés dans le séminaire. Ils ou elles liront en particulier des extraits, en version originale et en traduction, des textes présentés dans le cadre du cours.

ECTS: 6

Learning Outcome:

Les étudiantes et les étudiants acquerront des connaissances de base pour lire et comprendre un texte littéraire français du Moyen Âge. Ils et elles se familiariseront avec les outils de travail (bibliographie, dictionnaires, répertoires) et établiront un premier contact avec les différentes écoles interprétatives contemporaines et historiques de la médiévistique.

Module The Linguistic Change

06SM390-005 / Module

Description:

General description:

Le module met en relief la diversité du français et des variétés galloromanes dans leur trajectoires diachroniques et dans leur manifestations textuelles. À l'exemple d'un cas concret (un genre textuel, un dialecte, une interrogation thématique précise), il s'interroge sur des phénomènes de changement dans les différents domaines du langage afin de sensibiliser les étudiants à la nature et à l'impact du changement linguistique et afin de leur donner une idée de la profondeur historique des langues actuelles. Des exercices non-notés sont prévus durant le semestre.

ECTS: 6

Learning Outcome:

Les étudiantes et les étudiants arriveront à identifier et à analyser des phénomènes de changement linguistique en français et, plus généralement, dans la Galloromania. Ils sauront gérer la bibliographie scientifique et ils sauront extraire et analyser des données de corpus authentiques.

La première partie du module sera consacrée aux problèmes de base de la linguistique. Après quelques réflexions sur les caractéristiques fondamentales du langage et la nature du signe linguistique, nous initierons les étudiants aux disciplines fondamentales de la linguistique en appliquant leurs méthodes au français : la phonologie (la phonétique), la morphologie/la formation des mots, la syntaxe et le lexique/la sémantique. Le but de ce cours est de fournir aux étudiant(e)s les outils de base nécessaires à l'analyse de la langue française. La deuxième partie du module prendra appui sur cette structuration pour introduire les étudiants aux caractéristiques du français médiéval, à la compréhension et à l'analyse des textes anciens.

Module Fundamental Principles of Literary Analysis

06SM427-001 / Module

Description:

General description:

Los contenidos de este módulo permiten al / a la estudiante adquirir las claves teóricas y metodológicas del análisis literario, potenciando sus habilidades analíticas e interpretativas. Durante el primer semestre se abordarán aspectos generales del análisis literario y también de narratología como herramienta teórica para el análisis del discurso narrativo. Estas nociones teóricas serán puestas en práctica a través de ejercicios y de la elaboración de un trabajo escrito. Sobre esta base, en las primeras sesiones del segundo semestre se abordarán los fundamentos de la métrica, la retórica, y las relaciones entre enunciado y enunciación poética para después centrar todo el esfuerzo en la praxis analítica discursiva e interpretación de distintos textos poéticos. Esta labor se llevará a cabo a través de ejercicios y culminará con la redacción de un trabajo escrito individual de 5-5 págs. (análisis discursivo de un poema).

ECTS: 6

Notes:

En el FS27 el módulo tendrá también dos grupos: grupo 1 (lunes, 10:15 - 12:00) y grupo 2 (miércoles, 10:15-12:00).

Learning Outcome:

Las/los estudiantes aprenden las categorías y los conceptos teóricos fundamentales que se emplean en el análisis literario. Module Analysis of Systemic Linguistics

06SM427-013 / Module

Description:

General description:

El curso de profundización es el último curso antes de la preparación de la tesis de grado; en él se estudia un tema monográfico de la lingüística sistémica iberorrománica a partir de bibliografía actual y aplicando los conocimientos teóricos y metodológicos de los cursos anteriores. Está organizado como curso presencial, con clases semanales en las que se tratan aspectos particulares del tema general. Cada semana se preparan ejercicios (p. ej. preguntas sobre lecturas, ejercicios de análisis de ejemplos, ejercicios de corpus); una vez durante el semestre se presenta un tema en una exposición oral, en ella se demuestra la familiaridad con un tema particular y la capacidad de exponerlo de manera clara y sintetizada con el apoyo de medios visuales delante del grupo. La preparación de este tema de investigación particular servirá como ejercicio previo a la preparación de la tesis de grado.

Module Introduction to Diachronic Linguistics and Dialectology

06SM410-004 / Module

Description:

General description:

L'unità didattica si propone di introdurre i/le discenti alla linguistica storica italiana, tramite la presentazione delle nozioni di base di linguistica diacronica, di storia della lingua e di geografia linguistica. Tale presentazione avviene a partire dai livelli di analisi fonetico e morfologico, per poi toccare anche degli altri (in particolare lessico e sintassi). Si introducono così i principali mutamenti intervenuti a trasformare il latino parlato nell'italiano e nelle sue varietà dialettali, trattando dei fenomeni rilevanti in prospettiva paradigmatica ed esemplificandoli con testi di diverse epoche, col supporto di materiali distribuiti a lezione (fogli di accompagnamento ed esercizi).

Parallelamente alla frequenza del corso gli studenti potranno seguire un tutorato per ridiscutere i temi trattati. La comprensione dell'origine dell'italiano e delle sue varietà costituisce il presupposto per il prosieguo degli studi di italiano (in particolare nei seminari di linguistica).

ECTS: 3

Learning Outcome:

Gli studenti e le studentesse acquisiscono le nozioni basilari per l'analisi diacronica delle varietà italo-romanze, lo studio delle fasi antiche della formazione dell'italiano e dei volgari italo-romanzi e la differenziazione geolinguistica odierna dell'Italoromània.

Module Introduction to Textual Analysis and Literary Criticism

06SM410-006 / Module

Description:

General description:

Il modulo fornisce un'introduzione ai fondamenti dell'analisi del testo e della critica letteraria nell'ambito dell'italianistica. A partire da alcune domande fondamentali (cos'è un testo letterario? Cosa significa fare critica letteraria? Esistono diverse tipologie di approccio critico ai testi?) e da concetti chiave quali "genere letterario", "macrotesto" e "fonte", saranno forniti gli strumenti metodologici indispensabili all'analisi del testo letterario, in particolare narrativo e poetico. Una parte del modulo sarà inoltre consacrata all'introduzione di differenti teorie interpretative e approcci critici al testo, nonché allo studio delle intersezioni tra letteratura e altri saperi.

ECTS: 6

Notes:

Il modulo sarà organizzato su due semestri. Nel primo si prevede la frequenza di lezioni per quattro ore settimanali con verifica continua (discussioni sul forum, esercizi, ecc.). Nel secondo, la stesura individuale (Selbststudium) di un lavoro scritto originale, da consegnare entro il 30 aprile e da discutere con la/il docente nella prima settimana di giugno.

Learning Outcome:

Gli studenti e le studentesse saranno introdotti/e ai fondamenti della critica letteraria. Verranno presi in esame i diversi approcci metodologici e disciplinari esistenti, in modo da fornire gli strumenti critici, metodologici e terminologici indispensabili all'analisi e all'interpretazione del testo letterario. In particolare, essi dovranno acquisire le competenze tecniche e formali necessarie alla stesura di un'analisi scientifica del testo letterario.

Module From Latin to Romance

06SM430-002 / Module

Description:

General description:

In dieser Übung gehen wir der Frage nach, wie sich aus der (zu relativierenden) Einheit des Lateins zur Zeit des römischen Reiches nach dessen Zusammenbruch eine Vielzahl von Romanischen Sprachen entwickeln konnten, und weshalb sich letztere dermassen stark von ihrer gemeinsamen Ursprungssprache unterscheiden, indem sie z.B. die lateinische Deklination weitestgehend abgebaut, dafür eine neue grammatische Kategorie in Form eines Artikels ausgebildet haben. Einerseits besprechen wir den sprachlichen Wandel anhand verschiedener Beschreibungsebenen wie der Lautentwicklung, dem morphologischen und syntaktischen Wandel (inkl. typologischer Korrelate), der vergleichend-historischen Lexikologie. Andererseits lernen wir grundlegendes zum Umgang mit Quellen der Sprachgeschichte (vom Vulgärlatein über die frühesten Sprachzeugnisse bis zum Ursprung der romanischen lateinischen Literatursprachen).

ECTS: 6

Learning Outcome:

Überblick über die vergleichenden Sprachgeschichte der romanischen Sprachen, ihrer Methoden und Quellen. Kenntnis der wichtigsten strukturellen Entwicklungen der einzelnen Areale und Sprachen (Lautwandel, morphologischer und syntaktischer Wandel, vergleichende Lexikologie). Einführung in die philologische Analyse von Texten älterer Sprachstufen.

Module Spanish Language (A1-A2)

06SM430-010 / Module

Description:

General description:

Methodologisch wird darauf gesetzt, Sprache als Kommunikationsinstrument aufzufassen. Darum wird an den produktiven und rezeptiven Fertigkeiten pragmatisch gearbeitet. Dieser Kurs vermittelt Grundkenntnisse in Grammatik und Wortschatz, die den Teilnehmern und Teilnehmerinnen erlauben werden, sich eine elementare Sprachverwendung anzueignen. **WICHTIGER HINWEIS:** Wer ein DELE A2 besitzt, muss dies dem Studienprogrammkoordinator mitteilen. Die Anzahl der verfügbaren Plätze ist beschränkt. Es können nur 16 Buchungen berücksichtigt werden. Das Buchungstool erlaubt keine Stornierung der Einschreibung, sobald der Unterricht begonnen hat. Es ist daher wichtig, sich darüber im Klaren zu sein, dass dieses Modul für Studierende der Romanistik konzipiert ist, was bedeutet, dass sowohl das Arbeitstempo als auch die Anforderungen sehr hoch sind. Wer also die zeitlichen Ressourcen (etwa 6 Stunden pro Woche, einschliesslich Unterricht) nicht aufbringen kann, wird gebeten, seine Entscheidung zu überdenken, damit diejenigen, die bereit sind, diese Zeit zu investieren, bessere Chancen auf einen Platz haben.

ECTS: 3

Notes:

Studierende, welche folgende Kriterien erfüllen, haben Vorrang bei der Platzvergabe. Nach absteigender Relevanz sortiert: Einschreibung auf Studienprogramm Vergleichende Romanische Sprachwiss. Module French as a Foreign Language

06SM390-503 / Module

Description:

General description:

Le module thématise les difficultés (surtout grammaticales) du français en tant que langue étrangère, dans deux cours parallèles synchronisés, l'un de caractère linguistique, théorique, explicatif, l'autre de caractère plutôt appliqué. Dans le deuxième, les étudiantes et les étudiants sont censés faire des exercices de semaine en semaine et de passer deux petits tests écrits, tandis que le premier les amène à une réflexion (méta) linguistique leur permettant de comprendre les régularités auxquelles ils s'entraînent et qu'ils devront expliquer aux apprenants à l'avenir. Dans le cadre de ce cours, les étudiantes et les étudiants doivent présenter une analyse d'un phénomène précis, partant de la description scientifique, mais se basant en même temps sur une analyse empirique de 'fautes' authentiques; ils développeront aussi une petite unité didactique pour la transmission des connaissances acquises à de futurs élèves.

ECTS: 12

Learning Outcome:

Les étudiantes et les étudiants disposeront de connaissances théoriques (explicatives) des phénomènes linguistiques (surtout grammaticaux) enseignés à l'école les plus importants (tels que l'accord du participe passé, pronoms personnels, toniques et clitiques, formation et emploi de temps et de modes différents, surtout le subjonctif etc.). Ils maîtriseront une terminologie moderne et adéquate pour leur description, comprendront les régularités sous-jacentes aux structures et aux 'fautes' et maîtriseront les phénomènes en question aussi dans leur propre production orale et écrite. Ils sauront réfléchir à une mise en pratique des connaissances acquises en classe.

Languages of Instruction:

Französisch

Merkmale:

Responsible instructor: Elisabeth Stark

Requirements:

Prerequisites:

Les étudiantes et les étudiants doivent connaître les domaines de description de la linguistique (française), en maîtriser la terminologie et les notions fondamentales, et avoir de bonnes connaissances en grammaire française. Un niveau de langue C1 en français est recommandé, ainsi que des connaissances solides (passives) de l'anglais.

Ce module est ouvert uniquement aux étudiant·e·s de Master. Les étudiant·e·s de Bachelor ne sont pas autorisé·e·s à le suivre en tant que module de Master anticipé.

Assessment:

Portfolio: devoirs écrits hebdomadaires (20%), deux tests écrits (30%), exposé (20%), travail écrit de 15 pages (30%; peut être rédigé pendant le deuxième semestre du module).

Dates des deux tests écrits du volet "La grammaire en pratique": le 6 novembre 2026 et le 18 décembre 2026.

Emplearemos una metodología ecléctica basada en la concepción de la lengua como instrumento de comunicación. Trabajaremos las destrezas tanto productivas como receptivas desde una perspectiva pragmática para que los alumnos sean capaces de desenvolverse con fluidez, eficacia y precisión en el mundo de habla hispana.

Sabe reconstruir la información y los argumentos procedentes de diversas fuentes, ya sean en lengua hablada o escrita, y presentarlos de manera coherente y resumida. Module Cultural Production and Theories

06SM427-513 / Module

Description:

General description:

El seminario se orienta hacia la lectura y análisis de producciones culturales latinoamericanas, partiendo de los estudios literarios y ampliando el corpus teórico hacia los estudios culturales. La lectura de textos representativos de pensadoras/es y escritoras/es de la región permite, por un lado, la identificación e interpretación de los principales paradigmas que han marcado la producción cultural en América Latina. Por otro lado, estos paradigmas son identificados en los textos, con el fin de reflexionar sobre los recursos correspondientes a la literatura y las artes. Asimismo, se discuten los modos en que estas inciden en las dinámicas culturales.

ECTS: 9

Learning Outcome:

Las/los estudiantes se familiarizan con nociones fundamentales sobre las teorías culturales y comprenden su importancia en la construcción de sentido en la producción cultural latinoamericana. Las/los estudiantes aprenden a relacionar e interpretar producciones literarias y estéticas desde el marco de los estudios culturales. El fundamento teórico les permite comprender la cultura como un sistema de producción de sentidos y de estéticas interrelacionados, en el que la literatura participa críticamente. Son capaces de articular contenidos científicos complejos en un discurso pertinente y riguroso, incluyendo en sus reflexiones las aportaciones de la teoría y la crítica, con las que establecen un diálogo.

Sie dient Studierenden dazu, einen ersten Einblick in die thematische Breite des Faches sowie in seine Veränderungen im Laufe der letzten Jahrzehnte zu gewinnen. Im Mittelpunkt steht dabei die kritische Auseinandersetzung mit zentralen Konzepten und wissenschaftlichen Traditionen im Fach, sowie die Frage, wie sich ihre Bedeutungen mit der Zeit verändert haben. Neben den zentralen Fragestellungen und Debatten findet auch eine kurze Einführung in die epistemologischen, theoretischen und methodischen Traditionen des Faches statt.

ECTS: 6

Learning Outcome:

Die Vorlesung hat das Ziel Studierende in das Fach der Ethnologie einzuführen. Hierzu werden die zentralen Konzepte und Gegenstandsbereiche vorgestellt und diskutiert. Dies soll eine kritische Auseinandersetzung auch mit deren historischen Entwicklung ermöglichen. Die Vorlesung stellt die Grundlage für alle kommenden Module des Studiums dar.

Module Working with Anthropological Texts

06SM721-002 / Module

Description:

General description:

In der Übung und dem Tutorat dieses Moduls werden die wissenschaftlichen Techniken des Lesens, Schreibens und Analysierens miteinander verbunden. In der Übung stehen verschiedene Textgenres im Vordergrund. Neben wissenschaftlichen Artikeln sind Monographien zentraler Bestandteil der Ethnologie. Studierende beschäftigen sich mit einer ethnographischen Monographie, deren späterer Rezeption und aktuellen Relevanz. Im Unterricht analysieren und kontextualisieren sie eine exemplarische ethnologische Forschung. Sie bereiten sich auf den Unterricht durch die Lektüre vorgegebener Literatur vor, verfassen im Laufe des Semesters eigene wissenschaftliche Texte und üben sich in Präsentationstechniken. Im Tutorat stehen grundlegende wissenschaftliche Arbeitstechniken im Vordergrund, die fachspezifisch erläutert und im Unterricht eingeübt werden. Schwerpunkt ist die Vorbereitung auf die Aufgaben der Übung. Auch inhaltlich beziehen sich Tutorat und Übung aufeinander.

ECTS: 9

Learning Outcome:

Studierende erlernen zentrale Aspekte der Analyse von ethnologischen Texten und grundlegende wissenschaftliche Arbeitstechniken. Aufbauend auf den im Assessmentjahr erworbenen akademischen Kompetenzen, werden diese im Laufe des Bachelorstudiums systematisch vertieft.

Module Core field: Economic Anthropology

06SM721-102 / Module

Description:

General description:

Die Vorlesung vermittelt einen Überblick über zentrale Themen und Theorien der ökonomischen Anthropologie. Unterschiedliche Formen der Produktion, Konsumption und Distribution von Gütern werden dabei in vergleichender Weise und im jeweiligen sozialen und kulturellen Kontext betrachtet. Zugleich werden übergreifende Fragen nach den Strategien von (Über-)Lebenssicherung, Aspekten der globalen Einbettung und Ungleichheit sowie nach der Motivation menschlichen Handelns angesprochen. Anhand von klassischen und zeitgenössischen Texten werden empirische Fallbeispiele und theoretische Erklärungsmodelle vorgestellt und diskutiert. Besonderes Augenmerk ist dabei auf das Verhältnis von individueller Handlung, institutionellen Rahmenbedingungen und globalen Ungleichheiten gerichtet.

ECTS: 3

Learning Outcome:

Ziel der Veranstaltung ist es ökonomische Strukturen auf lokaler und globaler Ebene in ihren jeweiligen sozialen und kulturellen Kontexten zu verstehen und analysieren. Damit trägt die Vorlesung auch zur Debatte um Relativismus und Universalismus bei sowie zur Sensibilisierung gegenüber gegenwärtigen Prozessen der Globalisierung und deren Auswirkungen auf die Lebenswelten von Menschen in unterschiedlichen Teilen der Welt. Ein zentrales Ziel ist es zudem, ein Verständnis von ökonomischen Strukturen auf andere Bereiche des sozialen und kulturellen Lebens zu schärfen.

Module Current Debates in Social Anthropology

06SM721-500 / Module

Description:

General description:

This course is designed for MA students to familiarize themselves with a variety of current debates and theoretical strands in social/cultural anthropology. To do so, we start with a discussion of key terms (explanation, understanding, concept, theory, objectivity and positionality). Additionally, we will address questions important for the social sciences in general, such as why people act the way they do. Based on this foundation, we focus on arguments and debates that are central to recent developments within the discipline. These may include themes like social change, development, worldviews, ethics, material culture, political ecology, care as well as cognitive, existential, or feminist approaches within social/cultural anthropology. The detailed discussions of the respective controversies, concepts and theoretical approaches aim to help students frame and prepare their research and data analysis.

ECTS: 6

Learning Outcome:

This seminar is an advanced course on anthropological debates and the use of different concepts and theories in social/cultural anthropology. It familiarizes students with classic theories as well as current debates to develop their own perspectives and support them when analyzing their own empirical data. The debates, concepts and theories discussed in this course are of a general nature, applicable to a range of issues in cultural and social anthropology. Through intensive reading and in-class discussion students will develop their skills in engaging with texts and debates. The course will enable students to apply specific concepts and theories to their respective research themes.

Module Research Seminar on Ethics, Religion and Knowledge

06SM721-650 / Module

Description:

General description:

Every person has a life to live. Acting inevitably means giving answers to ethical questions like: How should I live? How should I interact with others? The respective answers people give in and through their everyday lives are affected by and embedded in knowledge formations and religious traditions. Accordingly, in this seminar we focus on secular and religious authorities, institutions, and traditions that guide peoples' lives. Which forms of knowledge, modes of politics, and ways of living do they enable and inhibit? Why and how do people adhere to or subvert them? Studying ethnographic examples and engaging with current theoretical debates, the seminar aims to do justice to the complexities and ambiguities of human life forms and practices. It critically examines the authorities, institutions, and traditions that make certain ways of life appear natural as well as the conflicts that emerge around them.

ECTS: 9

Learning Outcome:

This research seminar introduces central theoretical debates and empirical case studies dealing with the anthropology of ethics, knowledge, and religion. Students familiarise themselves with the relevant literature, understand how the three themes are interrelated, identify an original research topic, develop a relevant research question and write a research paper on the basis of their own academic interests in these fields.

Module Material Culture of the Middle Ages

06SM640-502 / Module

Description:

General description:

Das Modul dient der vertieften Auseinandersetzung mit der materiellen Kultur der Spätantike und des Mittelalters. Unter wechselnden Oberthemen werden einzelne Objekte und Objektgattungen in den Blick genommen, die in ihrer jeweiligen Entität zu erschliessen, aber auch auf ihre kulturhistorische Aussagekraft hin zu befragen sind. Unter anderem geht es darum, das Aussagepotenzial von Objekten der materiellen Kultur als "historische Dokumente" zu evaluieren und die damit verbundenen Theorien kritisch zu reflektieren.

ECTS: 9

Learning Outcome:

Die Studierenden sind fähig, auf der Basis einer kritischen Auseinandersetzung mit der Forschungsliteratur Objekte aus der Spätantike und dem Mittelalter, die als archäologische Funde, in Kirchenschätzen oder auf anderem Wege auf uns gekommen sind, zu erschliessen und in Hinblick auf das übergeordnete Seminarthema zu befragen. Sie sind in der Lage, divergierende Forschungsmeinungen gegeneinander abzuwägen und sich auf der Basis einer eingehenden Beschäftigung mit dem jeweiligen Objekt und seinem Überlieferungskontext eine eigene Meinung zu Entstehungszeit, Funktion und Besonderheiten zu bilden.

Module Critical Readings in East Asian Art History

06SM642-501 / Module

Description:

General description:

Dieser Kurs ist darauf ausgelegt, das individuelle Studium kritischer Forschungsliteratur im Bereich der ostasiatischen Kunstgeschichte zu unterstützen. Durch eine Kombination aus vom Dozenten ausgewählten Texten und auf die jeweiligen Forschungsinteressen der Studierenden zugeschnittenen Materialien (in Absprache mit und genehmigt durch den Dozenten/die Dozentin) erweitern und vertiefen die Studierenden ihr Verständnis für zentrale Inhalte, Diskurse, Theorien und Methodologien der Disziplin. Von den Teilnehmenden wird erwartet, dass sie sich kritisch mit den zugewiesenen Texten auseinandersetzen und über deren Relevanz für laufende wissenschaftliche Debatten reflektieren. Die Fähigkeit, diese Materialien zu diskutieren und zu kontextualisieren, ist wesentlich für die Abschlussprüfung.

ECTS: 6

Learning Outcome:

Die Studierenden ergänzen und vertiefen bereits erworbene Kenntnisse kunsthistorischer Diskurse, Theorien und Methodologien im Bereich der Kunstgeschichte Ostasiens. Sie sind in der Lage, Forschungsliteratur zu verstehen, zu evaluieren, zu interpretieren, sowie entnommene Informationen in eigenes, anwendbares Wissen umzuwandeln. Die Studierenden sind fähig, Aussagen unterschiedlicher Autoren sachlich einander gegenüberzustellen, die jeweiligen Inhalte zu reflektieren und in eigenen Aussagen und Interpretationen auf konkrete oder abstrakte Bereiche anzuwenden.

Das Modul setzt sich mit den Anforderungen wissenschaftlichen Arbeitens auseinander sowie mit den Grundfragen wissenschaftlicher Betrachtung von Kunst und Architektur. Anhand ausgewählter Werke verschiedener Gattungen und Entstehungszeiten werden diese und andere Fragen der Zuweisung von Werten, Rollen und Aufgaben an Kunstwerke, Kunstschaaffende und Institutionen diskutiert. Wichtige Schritte des wissenschaftlichen Arbeitens werden gemeinsam erarbeitet, darunter das Recherchieren von Literatur und Bildquellen, die kritische Textlektüre und das Halten von Kurzreferaten. Das Modul umfasst neben einem Seminar ein obligatorisch zu besuchendes Tutorat, das in kleinen Gruppen und über E-Learning-Aufgaben wissenschaftliche Arbeitstechniken und den Gebrauch von Hilfsmitteln einübt.

ECTS: 9

Learning Outcome:

Studienanfängerinnen und Studienanfänger werden mit Grundproblemen wissenschaftlicher Betrachtung von Kunst vertraut und erwerben Grundkenntnisse in der Geschichte von Kunst und Architektur vom Frühmittelalter bis zur Gegenwart und ihrer Kontextualisierung, in Theorien und Methoden sowie in der Wissenschaftsgeschichte des Faches. Zudem erlernen die Studierenden verschiedene Bereiche des wissenschaftlichen Arbeitens und sind so in der Lage, einschlägige wissenschaftliche Techniken in verschiedenen thematischen Kontexten anzuwenden: Sie kennen die fach- und studienspezifischen Anforderungen (Recherche, Bild- und Architekturbeschreibungen, Referate, Seminararbeiten).

Module Swiss Castles – Terminology, Typology and Archaeology

06SM640-007 / Module

Description:

General description:

Das Modul dient dazu, verschiedene Objektgattungen aus Spätantike und Mittelalter in ihrer spezifischen Materialität und Funktionalität zu bestimmen. Dies schliesst sowohl kunsthistorische als auch archäologische Fragestellungen ein. Es geht darum, die Objekte nicht zuletzt auf ihre Aussagekraft als historische "Dokumente" zu befragen, ihren Überlieferungskontext zu kennen und diesen unter Anwendung der in den Einführungskursen erlernten Methoden zu analysieren.

ECTS: 6

Learning Outcome:

Die Studierenden sind fähig, Objekte aus der Spätantike und dem Mittelalter, die als archäologische Funde, in Kirchenschätzen oder auf anderem Wege auf uns gekommen sind, zu beschreiben, zu analysieren und in Hinblick auf eine übergeordnete Fragestellung aufzubereiten. Die dafür notwendige Forschungsliteratur können sie anhand der einschlägigen bibliographischen Suchinstrumente recherchieren.

06SM640-017 / Module

Description:

General description:

Das Modul behandelt theoretische Reflexionen über den Stellenwert und die kulturellen Funktionen von Bildern. Zu den möglichen Schwerpunkten gehören einerseits Texte, die im weitesten Sinne dem systematischen Erkenntnisinteresse einer Bildwissenschaft zugerechnet werden können. ECTS: 6

Learning Outcome:

Die Studierenden kennen wichtige Begriffe und Argumente bildtheoretischer Diskussionen aus einem ausgewählten Korpus von Texten. Sie sind in der Lage, zentrale Kategorien der behandelten Texte zu identifizieren, ihre Argumentationsmuster zu rekonstruieren und ihre rhetorischen Strategien zu beschreiben. Sie sind sensibilisiert für die Problematik einer historischen Kontextualisierung von Quellentexten.

Module Basic Latin

30SM_Lat_GI / Sprachkurs

Description:

General description:

In diesem Kurs werden anhand eines Lehrmittels die Grundlagen der lateinischen Sprache in Formenlehre, Syntax und Vokabular vermittelt. Im Laufe des Kurses kommt vermehrt die Lektüre einfacher Originaltexte hinzu. Parallel zum Sprach- und Lektüreunterricht werden wichtige Aspekte der römischen und griechischen Kultur behandelt.

Die sprachlichen Kenntnisse entsprechen (in einer für die Alten Sprachen modifizierten Skala) A2/B1 (gesicherte Lateinkenntnisse).

Das Modul "Grundlagen Latein" kann in zwei Varianten absolviert werden: als 1-semesteriger Kurs (fast track), der jedes Herbstsemester angeboten wird, und als 2-semesteriger Kurs, mit dem in jedem Semester (HS und FS) begonnen werden kann.

In der zweiten Hälfte des Kurses besteht die Möglichkeit, das Modul unter bestimmten Umständen zu stornieren. Buchen Sie das Modul direkt über die Website des Sprachenzentrums (<https://www.sprachenzentrum.uzh.ch>) und beachten Sie die Anmeldefristen.

Ein definitiv nicht bestandenenes Modul "Grundlagen Latein" führt zu einer definitiven Abweisung und Sperre in allen Programmen der PhF, die das definitiv nicht bestandene Modul "Grundlagen Latein" als Pflichtmodul enthalten.

ECTS: 6

Learning Outcome:

Die Studierenden besitzen Grundkenntnisse der klassischen lateinischen Sprache in Wortschatz und Wortbildung und kennen die Haupterscheinungen der lat. Grammatik (Formenlehre, Syntax).

Sie sind in der Lage, einfache lateinische Texte zu verstehen und zu übersetzen.

Sie können Hilfsmittel (Grammatiken, Wörterbücher und zweisprachige Textausgaben) nutzen.

Die Studierenden kennen wichtige Elemente der römischen (und griechischen) Kultur (z.B. Literatur, Mythologie, Geschichte, Philosophie, Rhetorik, Theaterwesen usw.) und (ansatzweise) ihrer Nachwirkung in Mittelalter und Neuzeit (Humanismus, Klassizismus) und können Bezüge zur Gegenwart und den Inhalten ihrer Studienprogramme herstellen.

Entsprechend dem Niveau A1 und A2 des Europäischen Referenzrahmens lernen die Teilnehmenden, sich vorzustellen und andere zu begrüßen, Bitten, Entschuldigungen, Vorlieben auszudrücken und zu erwidern, Vereinbarungen zu treffen, sich selbst wie auch Familie, Umgebung, Ausbildung und Interessen zu beschreiben und sich darüber auszutauschen, kurz und einfach über ein Ereignis, über Aktivitäten und persönliche Erfahrungen aus der Vergangenheit zu berichten, Objekte im Raum zu lokalisieren, mit Zahlen, Uhrzeiten, Preis- und Mengenangaben zurechtzukommen, Auskünfte zu erfragen und zu geben. Die Themenauswahl berücksichtigt neben dem Alltag auch den Studienkontext. Dementsprechend werden im Hinblick auf den Aufbau von Lesekompetenz von Fachtexten die passiven Kompetenzen - auch mit Hilfe der Technik der Interkomprehension - gezielt gefördert.

01SM59LB001 / Repetitorium

Description:

General description:

Die Studierenden erarbeiten sich mit Unterstützung des/der Dozierenden sowie selbstorganisiert in Gruppen ein religionswissenschaftlich relevantes Thema, das historische, sozialwissenschaftliche und systematisch-theoretische Aspekte aufweist und insofern der Konsolidierung einer breiten Fachidentität dienen kann. Sie planen und organisieren gemeinsam einen Studientag für andere Studierende der Religionswissenschaft, denen sie ihr Thema vorstellen und didaktisch sinnvoll (durch Vorträge, Gruppendiskussionen, Gastreferate, Museumsbesuche etc.) vermitteln. Insgesamt bietet das Repetitorium die Möglichkeit, neben fachlichen Grundkompetenzen auch Grundlagen des Projektmanagements, der Organisation und der Teamarbeit kennenzulernen und anzuwenden.

ECTS: 3

Module Bachelor's thesis

01SM59LB002 / Bachelor Paper / BA-Arbeit

Description:

General description:

Die Bachelorarbeit ist eine schriftliche wissenschaftliche Arbeit, die formal und sachlich den wissenschaftlichen Standards in der Religionswissenschaft entspricht. Sie bearbeitet ein selbst gewähltes religionswissenschaftliches Thema, indem sie den Stand der Forschung in Grundzügen darstellt, sich mit einschlägiger Sekundärliteratur auseinandersetzt und an religionswissenschaftlich relevante Theorien anschliesst. Die Bachelorarbeit kann in der Form einer Literaturarbeit ausgeführt werden oder einen Forschungsgegenstand eigenständig mit anerkannten Methoden bearbeiten und eigene Ergebnisse präsentieren. Als Grundlage dient eine mit der Betreuungsperson abgesprochene Disposition; Themenfindung, methodisches Vorgehen, Literatur, Gliederung etc. werden mit der Betreuungsperson vereinbart.

ECTS: 15

Notes:

Bachelorarbeiten können von Professor*innen und Postdocs betreut werden.
Bitte wenden Sie sich direkt an die Person, durch die Sie betreut werden möchten.

Learning Outcome:

Die Studierenden sind in der Lage, sich über einen längeren Zeitraum mit einem selbst gewählten religionswissenschaftlichen Thema unter Verwendung einschlägiger Sekundärliteratur eigenständig auseinanderzusetzen. Sie können eine theoretisch reflektierte Fragestellung auf der Grundlage anerkannter, dem Thema und der Fragestellung angemessener Methoden und des aktuellen Forschungsstandes bearbeiten. Sie sind in der Lage, ihre Erkenntnisse im Rahmen einer grösseren schriftlichen Arbeit formal und inhaltlich korrekt darzustellen. Dabei nehmen sie eine religionswissenschaftliche Perspektive ein und drücken sich schriftlich auf einem guten sprachlichen Niveau, sachlich und differenziert aus.

Module Methodology SWM 1: Fieldwork

01SM57LB006 / Exercise Group

Description:

General description:

Die Studierenden erhalten einen theoretischen und praktischen Einblick in die Feldforschung. Sie erlernen und üben einzelne Schritte der Forschungspraxis unter Anleitung. Sie reflektieren typische Herausforderungen der religionswissenschaftlichen Feldforschung.

ECTS: 3

Learning Outcome:

Die Studierenden verfügen über Grundkenntnisse in den Methoden der Feldforschung für die sozialwissenschaftlich ausgerichtete Religionswissenschaft und können Anteile davon anwenden. Sie verfügen über erste Erfahrungen in der Anwendung und können diese reflektieren. Den Studierenden sind forschungsethische Herausforderungen bewusst. Sie können die spezifische Spannung von religionswissenschaftlicher Forschung und Involviertheit (z.B. über teilnehmende Beobachtung) in ein religiöses Feld reflektieren. Sie sind sich der Relevanz der eigenen Positionalität bewusst.

Wer das Modul SWRW MA-Seminararbeit 1 absolvieren möchte, kontaktiert vorgängig die dozierende Person, bei der die Arbeit eingereicht werden soll. Diese gibt die genauen Abgabebedingungen der Seminararbeit vor.

Das Modul SWRW MA-Seminararbeit 1 wird nicht von den Studierenden gebucht. Sondern der/die Dozierende leitet die Note nach Abgabe und Annahme an das Studiendekanat weiter. Dort wird das Modul gebucht und mit der Note als bestanden oder nicht-bestanden registriert.

Learning Outcome:

Die Studierenden sind in der Lage, sozialwissenschaftliche religionswissenschaftliche Fragestellungen anhand konkreter Fallbeispiele und gegebenenfalls mit selbst erhobenen Daten/Quellen zu bearbeiten und schriftlich auf wissenschaftlichem Niveau zu präsentieren.

Module Master's thesis

01SM59LM001 / Master Paper / MA-Arbeit

Description:

General description:

Die Masterarbeit ist eine komplexe wissenschaftliche schriftliche Arbeit, die einen eigenständigen Beitrag zur religionswissenschaftlichen Forschung darstellt und über bisher publizierte Forschungsergebnisse hinausgeht. Sie entspricht formal und sachlich den wissenschaftlichen Standards in der Religionswissenschaft, bearbeitet ein selbst gewähltes religionswissenschaftliches Thema im Hinblick auf mehrere Aspekte, indem sie den entsprechenden Stand der Forschung in Grundzügen darstellt, sich mit einschlägiger Sekundärliteratur auseinandersetzt und an religionswissenschaftlich relevante Theorien anschliesst. Sie kann in der Form einer Literaturarbeit ausgeführt werden (mit eigenständiger Fragestellung, Argumentation und Ergebnissen) oder einen neu bestimmten Forschungsgegenstand mit anerkannten Methoden bearbeiten und dafür eigene Daten/Quellen erheben und analysieren. Als Grundlage dient eine mit der Betreuungsperson abgesprochene Disposition. Im Verlauf der Arbeit an der Masterarbeit kann Unterstützung durch die Betreuungsperson geleistet werden, ebenso können Textteile und Zwischenergebnisse gemeinsam diskutiert werden.

ECTS: 30

Learning Outcome:

Die Studierenden sind in der Lage, ein selbst gewähltes Thema unter Verwendung einschlägiger Sekundärliteratur religionswissenschaftlich zu problematisieren, eine sinnvolle Forschungsfragestellung zu entwickeln, diese auf der Grundlage systematisch-theoretischer Reflexion und anerkannter Methoden der Religionswissenschaft eigenständig zu erforschen und ihre Erkenntnisse im Rahmen einer grösseren schriftlichen Arbeit formal und inhaltlich korrekt auf wissenschaftlichem Niveau darzustellen und zu vermitteln.

Module BIO 638 Next Generation Sequencing applied to Metagenomics

07SMBIO638 / Lecture with Practical Exercises

Description:

General description:

Next-generation sequencing (NGS) technologies have revolutionized many fields in biology and are changing the practice of medicine. One of the fields that have been particularly impacted is Metagenomics, which is the study of genetic material recovered directly from environmental samples without first culturing and isolating the organisms. Metagenomics analysis is used to explore the diversity, function, and ecology of different microbial communities such as microflora, water, soil, etc.

The practical consists of a library preparation starting from genomic DNA, followed by a sequencing run on both, a bench top and a single molecule sequencer. An introduction to existing and upcoming NGS technologies is also provided. Downstream analyses of the resulting data from both pipelines starts with the quality control and the management of the sequence data and expands to appropriate bioinformatics workflows to answer some of the key questions arising from this type of experiments (e.g., marker-gene and shotgun metagenomics).

Metatranscriptomics data will be covered briefly in the lectures.

The topics that will be covered include, methods of taxonomic assignment and clustering of targeted gene data; assembly, functional classification and characterization of shotgun metagenomic data; statistical models for estimating microbial diversity; and microbial community comparison methodology and metrics.

ECTS: 2

Notes:

For further information please check our website: <https://fgcz.ch/education/metagenomicscourse.html>

Room: at FGCZ Y59

Learning Outcome:

By the end of the course, participants will be able to:

1. Demonstrate an understanding of NGS technologies;
2. Assess the challenges involved in investigating the metagenome;
3. Perform library preparation and sequencing procedures in the laboratory;

Module BIO 637 Mass spectrometry-based metabolomics – from theory to practice

07SMBIO637 / Lecture with Practical Exercises

Description:

General description:

Metabolomics is an emerging field of the Life Sciences arena and has widespread applications across the medical, clinical and biological sciences, both in academic and industrial settings. Metabolomics aims to measure the intermediates and final products of metabolism in living organisms. The total set of metabolites in a biological system is known as the metabolome and represents the downstream effect of an organism's genome and its interaction with the environment.

In this course, we will provide an introduction to metabolomics, explain why we want to study the metabolome and describe the current challenges in analyzing metabolites in a biological system. We will describe the multidisciplinary approach adopted in metabolomics workflows and demonstrate how the combined efforts of scientist's from different disciplines (analytics, biochemistry and bioinformatics) is advancing this exciting field. The course is designed to bring theory and practice together, enabling the participants to apply metabolomics in a research- based context and to practice the use of specific software platforms for metabolomics data mining.

ECTS: 2

Notes:

The course is also suitable for Master students that are already familiar with the field of mass spectrometry.

For further information please check our website <https://fgcz.ch/education/metabolomicsCourses.html>

Meeting room: Y59-G-30 Practical: training lab and mass spec lab at the FGCZ (Y59)

Learning Outcome:

At the end of the course, participants will be able to:

1. Demonstrate an understanding of metabolism
2. Assess the challenges involved in investigating the metabolome
3. Develop an awareness of the analytical techniques and data analysis tools that are used to study the metabolome
4. Perform metabolite sample preparation procedures in the laboratory
5. Analyze biological samples using untargeted and targeted mass spectrometric approaches, including quality control samples and references compounds
6. Perform basic data analysis on both untargeted and targeted datasets (including qualitative and quantitative analysis, relative and absolute quantification, identification, pathway reconstruction)
7. Apply metabolomics into a research-based context by:
 - a. formulating a research question in the field of metabolomics
 - b. designing an experimental setup to address this research question
 - c. presenting their strategy to the class

07SMGEO721 / Field Trip

Description:

General description:

Das Modul besteht aus einer zweitägigen Exkursion in das Biosphärenreservat Engiadina Val Müstair (BEVM) und in den Schweizerischen Nationalpark, der die Kernzone des BEVM bildet. Folgende Themen werden dabei angesprochen:

- Regionalentwicklung, Akzeptanz von Schutzgebieten durch die Bevölkerung, Wertvorstellungen, Vergrößerung des Perimeters sowie verschiedene Forschungen im Nationalpark und im Biosphärenreservat.

Neben dem Lesen einer Vorbereitungslektüre werden während der Exkursion Aufgaben gelöst, die in einem kurzen Bericht zusammengefasst werden.

ECTS: 1

Notes:

Die Exkursion findet im August statt (genaues Datum wird noch bekannt gegeben). Die Anzahl der Teilnehmenden ist auf 20 beschränkt. Die Exkursion ist koordiniert mit einer ebenfalls im Herbst stattfindenden Exkursion in den Schweizerischen Nationalpark, die von Maria J. Santos geleitet wird. Es können beide Exkursionen (bzw. die entsprechenden Module) gebucht werden.

Kosten (ungefähr): Übernachtung im 8-Bett-Zimmer mit Nachtessen und Frühstück: 60.- + öV. zuzüglich mitgebrachte Lunchverpflegung.

Die Anmeldung findet über OLAT statt.

- Link website: <https://www.geo.uzh.ch/de/studying/during-your-studies/excursions.html>
- Ermächtigungsklausel: Die Studierenden erklären sich damit einverstanden, dass das Geographische Institut in ihrem Auftrag Buchungen bzw. Reservationen im angegebenen Kostenrahmen für die Exkursion vornehmen kann.
- Die Versicherung ist Sache der Teilnehmenden.

Die Agenda 2030 der Vereinten Nationen (UNO) umfasst 17 Ziele für nachhaltige Entwicklung (Sustainable Development Goals, SDGs (<https://sdgs.un.org/goals>)), die von allen UN-Mitgliedstaaten verabschiedet wurden. Sie bilden einen gemeinsamen Rahmen zur Förderung von sozialer Gerechtigkeit, Umweltschutz und wirtschaftlicher Entwicklung weltweit.

Behandelt werden in diesem Modul insbesondere: 13 & 15

Learning Outcome:

- Sie kennen die Regionalisierungen im Gebiet und wie sie zustande kamen.
- Sie erlangen einen Überblick über die Forschungsprojekte im Schweizerischen Nationalpark und im Biosphärenreservat Engiadina Val Müstair.
- Sie kennen die Methode der Volunteer Employed Photography und können diese in Grundzügen anwenden.

Module INI 507 Learning in Deep Artificial and Biological Neuronal Networks

07SMINI507 / Course

Description:

General description:

Deep-learning a brain-inspired weak form of AI allows training of large artificial neuronal networks (ANNs) that, like humans, can learn real-world tasks such as recognizing objects in images. The origins of deep hierarchical learning can be traced back to early neuroscience research by Hubel and Wiesel in the 1960s, who first described the neuronal processing of visual inputs in the mammalian neocortex. Similar to their neocortical counterparts ANNs seem to learn by interpreting and structuring the data provided by the external world. However, while on specific tasks such as playing (video) games, deep ANNs outperform humans (Minh et al., 2015, Silver et al., 2018), ANNs are still not performing on par when it comes to recognizing actions in movie data and their ability to act as generalizable problem solvers is still far behind of what the human brain seems to achieve effortlessly. Moreover, biological neuronal networks can learn far more effectively with fewer training examples, they achieve a much higher performance in recognizing complex patterns in time series data (e.g. recognizing actions in movies), they dynamically adapt to new tasks without losing performance and they achieve unmatched performance to detect and integrate out-of-domain data examples (data they have not been trained with). In other words, many of the big challenges and unknowns that have emerged in the field of deep learning over the last years are already mastered exceptionally well by biological neuronal networks in our brain. On the other hand, many facets of typical ANN design and training algorithms seem biologically implausible, such as the non-local weight updates, discrete processing of time, and scalar communication between neurons.

Recent evidence suggests that learning in biological systems is the result of the complex interplay of diverse error feedback signaling processes acting at multiple scales, ranging from single synapses to entire networks.

ECTS: 4

Notes:

The administration is carried out at the ETH. UZH students who want to book the course must register at ETH as special students and book the course at ETH. The link to the registration can be found on the next page.

Learning Outcome:

The main goal of this lecture is to provide a comprehensive overview into the learning principles neuronal networks as well as to introduce a diverse skill set (e.g. simulating a spiking neuronal network) that is required to understand how learning in large, hierarchical neuronal networks. To achieve this the lectures and exercises will merge ideas, concepts and methods from machine learning and neuroscience. These will include training basic ANNs, simulation spiking neuronal networks as well as being able to read and understand the main ideas presented in today's neuroscience papers.

After this course students will be able to:

- read and understand the main ideas and methods that are presented in today's neuroscience papers
- to explain the basic ideas and concepts of plasticity in the mammalian brain
- implement alternative ANN learning algorithms to 'error backpropagation' in order to train deep neuronal networks.
- use a diverse set of ANN regularization methods to improve learning
- simulate spiking neuronal networks that learn simple (e.g. digit classification) tasks in a supervised manner.

Target Group: Suitable for English Speakers

Responsible instructor:

Benjamin Grewe

Requirements:

Prior Knowledge:

This advanced level lecture requires some basic background in machine/deep

learning. Thus, students are expected to have a basic mathematical foundation, including linear algebra, multivariate calculus, and probability. The course is not to be meant as an extended tutorial of how to train deep networks in PyTorch or Tensorflow, although these tools used. The participation in the course is subject to the following conditions:

1. The number of participants is limited to 120 students (MSc and PhDs).
2. Students must have taken the exam in Deep Learning (263-3210-00L) or have acquired equivalent knowledge.

Assessment:

Written exam 120 Min.

The lectures are complemented with project work that will span across 14 lectures and comprise of 7 projects that have to be handed in on a bi weekly basis. At the end, the learning objectives will be evaluated through a written session exam which will determine the course grade.

Similar to the course, the session exam will consist of 50% biology and 50% machine learning questions. To be admitted to the session exam at least 5 out of 7 projects need to be handed in and evaluated as passed.

Module Scientific Presentation

04SMDER19001 / Kurs

Description:

ECTS: 4

Notes:

Kontakt-E-Mail:

emmanuella.guenova@usz.ch

Learning Outcome:

The aim of this course is to help PhD students acquire the basic scientific presentation skills necessary to present their project work clearly to the scientific community. Typical media in this context include oral presentations or posters at conferences, scientific reports, and journal manuscripts. The course will focus on giving students practical experience, and constructive feedback, in good abstract writing (a key component of conference and manuscript submissions) and oral presentations. These sessions will be complemented by tutorials on the entire manuscript writing and submission process, as well as good figure preparation practices. The course is not intended to cover scientific communication to the media or public, or appropriate data analysis methods, but is meant to highlight best-practices regarding presentation of scientific content to peer scientists.

Preparation work: Prior to the course, participants are required to write a 200 word abstract, with title, on their PhD project and data as if it were to be submitted to a journal for publication. During the course, participants will also be asked to present their PhD project in a 5 minute presentation, with slides. Participants will receive individual constructive feedback for both exercises.

07SMGEO802 / Block Course

Description:

General description:

The course will accompany students through the data information process across the research data lifecycle, from creation to preservation, sharing, and reuse. Participants will learn best practices for organizing, documenting, managing, and ethically using research data in line with requirements from their discipline and funding agencies. The course also discusses the role of artificial intelligence in data management. The result of the course will be a data management plan for their own research project.

ECTS: 1

Notes:

The Sustainable Development Goals (SDGs (<https://sdgs.un.org/goals>)) are a collection of 17 global goals interacting with each other, which are designed to be the blueprint to achieve a better and more sustainable future for all. The 2030 Agenda for SDGs is adopted by all United Nations Member States.

These SDGs are covered in this module: 4 & 10

Learning Outcome:

By the end of the course, students understand the importance of research data management. They can organize, document, store, secure, and preserve data using appropriate standards and metadata. Students will understand ethical and legal considerations related to data, including copyright, licensing, privacy, and data sharing requirements. They can locate, cite and reuse data from repositories and critically assess the opportunities and limitations of using AI in data management. They also know the elements of a data management plan and are prepared to generate a DMP for their own research project.

Target Groups:

PhD candidates and Master students in geography and biodiversity. This course is aimed primarily for PhD and Master students just at the beginning of their thesis.

Languages of Instruction:

English

Merkmale:

Target Group: Suitable for English Speakers

Responsible instructor:

Requirements:

Assessment:

To pass the course, students will have to:

- hand in a data management plan (DMP) for a project of their choice (e.g. master thesis). The DMP must be complete with sufficient information in all relevant sections.
- review one other student's DMP
- active participation in both days of the block course in order to pass.

If the DMP or the review of the other student's DMP is insufficient, the student has two weeks to correct it.

Module Master's thesis

01SM45LM001 / Master Paper / MA-Arbeit

Description:

General description:

Die Masterarbeit ist eine komplexe wissenschaftliche schriftliche Arbeit, die einen eigenständigen Beitrag zur religionswissenschaftlichen Forschung darstellt und über bisher publizierte Forschungsergebnisse hinausgeht. Sie entspricht formal und sachlich den wissenschaftlichen Standards in der Religionswissenschaft, bearbeitet ein selbst gewähltes religionswissenschaftliches Thema im Hinblick auf mehrere Aspekte, indem sie den entsprechenden Stand der Forschung in Grundzügen darstellt, sich mit einschlägiger Sekundärliteratur auseinandersetzt und an religionswissenschaftlich relevante Theorien anschliesst. Sie kann in der Form einer Literaturarbeit ausgeführt werden (mit eigenständiger Fragestellung, Argumentation und Ergebnissen) oder einen neu bestimmten Forschungsgegenstand mit anerkannten Methoden bearbeiten und dafür eigene Daten/Quellen erheben und analysieren. Als Grundlage dient eine mit der Betreuungsperson abgesprochene Disposition. Im Verlauf der Arbeit an der Masterarbeit kann Unterstützung durch die Betreuungsperson geleistet werden, ebenso können Textteile und Zwischenergebnisse gemeinsam diskutiert werden.

ECTS: 30

Learning Outcome:

Die Studierenden sind in der Lage, ein selbst gewähltes Thema unter Verwendung einschlägiger Sekundärliteratur religionswissenschaftlich zu problematisieren, eine sinnvolle Forschungsfragestellung zu entwickeln, diese auf der Grundlage systematisch-theoretischer Reflexion und anerkannter Methoden der Religionswissenschaft eigenständig zu erforschen und ihre Erkenntnisse im Rahmen einer grösseren schriftlichen Arbeit formal und inhaltlich korrekt auf wissenschaftlichem Niveau darzustellen und zu vermitteln.

Module ESS 385 Systems Analysis

07SMESS385 / Sonstiges

Description:

General description:

Systems Analysis is an important tool within the Earth Sciences. It aims to decompose Earth Systems into distinct components, and identify the relationships between these components. Then, this model description can be implemented quantitatively, and be used for different applications.

Potential applications include the study of system responses to changes in external forcings, and projections of future system dynamics under various scenarios. This course will introduce the theoretical basis of systems analysis theory, and provide an introduction into quantitative modelling of systems that are part of the different Earth System spheres.

ECTS: 3

Notes:

The Sustainable Development Goals (SDGs) (<https://sdgs.un.org/goals>) are a collection of 17 global goals interacting with each other, which are designed to be the blueprint to achieve a better and more sustainable future for all. The 2030 Agenda for SDGs is adopted by all United Nations Member States.

These SDGs are covered in this module: 13; 14 & 15

Learning Outcome:

The student will be able to:

- Analyze Earth Systems from a systems perspective
- Formulate, implement and analyze quantitative models, using both analytical and simulation/numerical techniques.
- Use MATLAB software for numerical modelling.

Target Groups:

5 Semester BSc in Earth System Science

Assessment:

During the one-week block course, students work each day on a Tutorial, that is handed in the next morning. The average score of these 5 tutorial reports counts for 60% of the grade. After the course, the students perform a model analysis on a self-chosen topic, and the results of the investigation are presented in a Final Assignment report, which counts for 40% of the grade. One feedback form is

provided, in which comments on each tutorial report and the final assignment is provided, and the final grade is communicated.

Module Principles of Science Education 3: Students Conceptions in Science Education

06SM090MAF1 / Module

Description:

General description:

Entlang des Modells der Didaktischen Rekonstruktion erheben und analysieren Sie typische Lernvoraussetzungen, setzen sich kritisch mit wissenschaftlichen Repräsentationen auseinander und entwickeln adaptive Lehr-Lernarrangements. Das Seminar ist am Konzept des Forschenden Lernens orientiert. Das heisst, Sie erwerben ein methodisches und theoretisches Instrumentarium, um die Vorstellungen von Lernenden in Vermittlungskontexten zu erheben und zu verstehen. Entlang der Durchführung einer gemeinsamen Forschungsarbeit werden die methodischen und theoretischen Ansätze in die Praxis übersetzt und erprobt. Über die Analyse individueller Denkpfade im Verlauf einer Intervention (z.B. einer Unterrichtsstunde) lernen Sie prozessorientiert Lernstände zu diagnostizieren.

Beschreibung:

Das Beruf von Medizinerinnen und Medizinern verändert sich rasch, und damit auch die damit verbundenen Tätigkeitsprofile. Diese reichen von der klinischen Tätigkeit oder einer selbständigen Praxis bis hin zu Forschung und Wissenschaft oder dem öffentlichen Gesundheitsdienst. In diesen Tätigkeitsbereichen wird es zunehmend wichtiger, dass Ärztinnen und Ärzte wissenschaftliche Studien und die Fachliteratur verstehen und kritisch hinterfragen können, um fundierte Entscheidungen in Diagnose und Therapie zu treffen. Darüber hinaus ist eine solide Grundlage in modernen Forschungstechnologien erforderlich, um biomedizinische Studien planen, durchführen und verstehen zu können.

Viele der neuen Forschungstechnologien befassen sich mit der Erhebung und Analyse von grossen Datensätzen mit Transcriptomics und Proteomics, und deren Integration mit klinischen Daten. In diesem Modul durchlaufen Sie einen vollständigen Forschungszyklus zur biomedizinischen Datenanalyse unter Verwendung von Transcriptomics- oder Proteomics-Daten aus unseren Forschungsprojekten. Dabei erwerben Sie Kompetenzen in der Anwendung verschiedener Bioinformatik-Methoden, um biologisch relevante Informationen aus grossen Datensätzen zu extrahieren. Zudem erlernen Sie unter Anleitung, und ohne dass Vorkenntnisse erforderlich sind, den Einstieg in die Programmiersprache R. Beim Durchlaufen des Forschungszyklus lernen Sie, relevante Fragestellungen zu formulieren, die entsprechenden Forschungsarbeiten eigenständig durchzuführen und die gewonnenen Resultate zusammenzufassen.

Mit diesem Modul erwerben Sie somit die Grundlagen für die biomedizinische Forschung mit grossen Datensätzen, auf der Sie in Ihren Master- und Promotionsarbeiten und in Ihrer späteren beruflichen Arbeit in verschiedenen Tätigkeitsprofilen aufbauen können.

Module Foundations of Strategy Management Research

03SMDOEC0901 / Doktorandenseminar

Description:

General description:

The course provides an overview of the fundamental theories and research themes in strategic management research in a three-day seminar format. Disciplinary roots, core theories, and important topics in strategic management research are covered by reviewing landmark articles on each theme. The course will consist of 3 full seminar days, including student presentations on articles, a short learning diary, and a short course paper.

ECTS: 3

Notes:

If you are interested in taking the course, please contact Chaowei Zhu (chaowei.zhu@business.uzh.ch)

Learning Outcome:

After the course, the participant should (1) be familiar with the disciplinary roots and most important theories in the area of strategic management, (2) understand how the different streams of research have evolved over time and how they are connected to each other, and (3) be able to project the future development of strategic management research from the perspective of one's own doctoral work.

Target Groups:

PhD students and young scholars

Languages of Instruction:

English

Course Materials:

A reading list (of published papers) will be shared at the beginning of the semester.

Merkmale:

Target Group: Suitable for English Speakers

Responsible instructor:

Thomas Keil

Requirements:

Prerequisites:

The seminar is designed for doctoral students in business administration with strong interest in strategy, which have successfully passed at least one course in general strategy and/or general international business at bachelor or master level.

Prior Knowledge:

Given the format and the requirements of this seminar, experience has shown that lack of pre-existing knowledge of the mentioned topics will affect the ability to understand the articles, the class discussions and possibly prevent the successful completion of the seminar. It is open to students from other departments and universities (as space permits).

Assessment:

- reading of the assigned articles and active participation in the seminar sessions
- presenting assigned articles
- A 3-4 page journal article introduction in the area of strategy or international management, suitable to be later developed into a full paper

Kurzbeschreibung

This course provides an introduction to Translational Neuromodeling (the development of computational assays of neuronal and cognitive processes) and their application to concrete clinical questions (Computational Psychiatry/Psychosomatics). It focuses on a generative modeling strategy and Bayesian models of neuroimaging data and behaviour, incl. exercises and project work.

Lernziel

To obtain an understanding of the goals, concepts and methods of Translational Neuromodeling and Computational Psychiatry/Psychosomatics, particularly with regard to Bayesian models of neuroimaging (fMRI, EEG) and behavioural data.

Voraussetzungen

PLEASE NOTE: for the exercises, knowledge of both MATLAB and Julia is required.

Semesterendprüfung

benotete Semesterleistung

Students are required to use one of the models discussed in the course and apply it to empirical data in order to address a given clinical question.

The model/analysis is to be submitted as open source code (in MATLAB or Julia). The motivation and results are presented in a 15 min oral presentation followed by 15 min critical discussion. Group work (up to 3 students) is required. The submitted code must be executable without any dependencies on specific operating systems or local setups.

Grading will depend on the (i) originality of the chosen modeling approach, (ii) quality and degree of completion of the modeling, (iii) clarity and functionality of the code, (iv) quality and clarity of the oral presentation, (iv) quality and clarity of the written project report.

The code is to be submitted by 29 May 2025 (23:59 CET) at the latest; the oral presentations take place on 30 May 2025 (exact time to be determined).

Admission to the final project is subject to students having successfully obtained at least 40% of the points for each exercise (1 miss allowed) during the semester.

Kurzbeschreibung

This five-day course (+ 1 day practical tutorials) teaches state-of-the-art methods in computational psychiatry. It covers various computational models of cognition (e.g., learning and decision-making) and brain physiology (e.g., effective connectivity) of relevance for psychiatric disorders. The course not only provides theoretical background, but also demonstrates open source software in application to concrete examples.

Lernziel This course aims at bridging the gap between mathematical modelers and clinical neuroscientists by teaching computational techniques in the context of clinical applications. The hope is that the acquisition of a joint language and tool-kit will enable more effective communication and joint translational research between fields that are usually worlds apart.

Module Principles of Neuroeconomics PhD

03SMDOEC0913 / Doktorandenseminar

Description:

General description:

In this course, students are expected to practice and demonstrate thoughtful combination of knowledge and skills learned in the separate compulsory courses within the Doctoral Program in Neuroeconomics. Specifically, students read and discuss a series of research articles that relate to the material covered in the other, previously completed compulsory courses. There is a written examination that tests how well students can interpret and critically evaluate the content and conclusions of the articles in light of what they have learned in all other compulsory modules.

ECTS: 3

Notes:

This course will be held on Tuesdays from 11:00-12:30 in the 2nd, 5th, 8th, and 11th weeks of the fall term. The articles to be discussed with the instructor on each date will be listed and distributed at the first meeting. Students are expected to have read each article in depth before each meeting. They should come prepared to ask questions about the articles themselves and/or how they relate to neuroeconomics in general.

This module will not be podcasted or recorded.

Venue: BLU-008

Learning Outcome:

Synergistic combination of basic facts, theoretical viewpoints, and data analysis techniques from economics, neuroscience, and psychology (i.e. neuroeconomics).

Target Groups:

Students enrolled in the Doctoral Program in Neuroeconomics

Module BIO 317 Advanced methods in genomic and cellular manipulation

07SMBIO317 / Block Course

Description:

General description:

A major aim of experimental research is to modify living systems at the genomic and cellular level to understand physiology and disease. Recent years have witnessed two major technological breakthroughs that now allow gene sequences and cellular behaviours to be manipulated with unprecedented resolution. The field of genome editing, using CRISPR-Cas9 and related technologies, allows the application of powerful genetic manipulation with an efficiency and breadth that was previously impossible. At the cellular level, new "optogenetic" approaches allow protein activities, and hence cell behaviour, to be controlled on-demand with light.

The combination of genome-editing and optogenetic technologies is driving a revolution in the life sciences. This block course will offer hands-on experience in both methods, from design to application in cells and model systems.

ECTS: 6

Notes:

REGISTRATION FOR BLOCKCOURSES HERE

<https://www.mybiportal.uzh.ch>

Learning Outcome:

On completion of this module students should be able to

- Design and apply CRIPR-based approaches to edit genes of interest, in both cultured cells and organismal model systems.
- Apply quantitative molecular techniques to determine knockout efficiency (fluorescent proteins transgene expressions, PCR methods, phenotypic analysis).
- Use CRISPR-based technology to integrate sequences of interested in predefined genomic locations (Knock-In)
- Design and apply optogenetics approaches to control cell shape and behavior with light.
- Use advanced microscopy to both visualise and manipulate cells in vivo.
- Measure kinetics of cellular responses using computational data analysis approaches.
- Interpret findings to understand underlying biology.

Key Skills

- Design tools for genome editing and optogenetic manipulation
- Find, organise and extract relevant scientific findings from the recent literature and critically evaluate their relevance to the contexts addressed in this module
- Prepare and present their research results in clear oral presentations
- Work collaboratively within small groups under the guidance of an experienced tutor

Description:

ECTS: 0

Notes:

Kontakt-Email:

monika.hebeisen@uzh.ch

Learning Outcome:

Lerninhalt:

The course offers an introduction to data analysis for medical research in the programming language R. The R system of statistical computing is freely available from <https://www.r-project.org> and provides a simple and flexible software environment for statistical analyses and graphics.

Tailored to the application in medical research the course covers basics of programming and data formats in R, and the essential steps of a data analysis including data manipulation, descriptive statistics, statistical tests and graphical representations. The course focuses on problem-based learning by combining the theory and the application to examples from medical research. Basic statistics knowledge from bachelor and master program Medicine is a prerequisite.

Lernziel:

After this introductory course, students are able to perform plausibility checks, descriptive analysis, statistical tests and visualization of their research data in R. The course aims to provide students with the essential tools to address their research questions in R and give them more confidence when solving their programming problems.

Unterrichtsformate:

Interactive course, hands on practical exercises, problem based learning.

Module ESS 417 Earth System Observations and Analyses

07SMESS417 / Lecture with Practical Exercises

Description:

General description:

The module introduces observational and analytical approaches to assess complex earth system processes. The focus is on in situ and remote sensing measurements combined with simple mechanistic models to assess exchange processes between the soil, plants and atmosphere. Course topics include the identification of research questions and the definition of experimental approaches to tackle these questions. The course introduces strategies to combine different observational data and process models (e.g. data quality assessment, data harmonization, local sensitivity analysis), and several analytical concepts to unravel spatial and temporal dynamics of earth system processes (e.g. variogram and time series analysis) and causality between environmental driver and processes (e.g. generalized additive models, anomaly detection).

The module combines lectures with lab work. Lectures present both theory and recent developments of observational techniques and data science to study earth system processes. Hands-on lab work conveys important skills such as experimental design, data assembly, harmonization, combination, and analysis as well as the communication of obtained results in a scientific article. The content of this module prepares for writing scientific thesis (i.e. MSc thesis) and is an integral part of the series of mandatory MSc ESS courses (ESS 401 and ESS416).

ECTS: 5

Notes:

The Sustainable Development Goals (SDGs) (<https://sdgs.un.org/goals>) are a collection of 17 global goals interacting with each other, which are designed to be the blueprint to achieve a better and more sustainable future for all. The 2030 Agenda for SDGs is adopted by all United Nations Member States.

These SDGs are covered in this module: 6; 13 & 15

Learning Outcome:

After successful completion, students

- have a throughout understanding on possibilities for using observational approaches to study Earth system processes
- understand how data can be combined with models
- can apply strategies to assess data quality and harmonize different data sources
- can apply analytical approaches for the assessment of spatial and temporal process dynamics
- can apply analytical approaches to assess causality between processes and underlying driver
- are able to comprehensively interpret data, critically discuss the results, and draw main conclusions
- practice scientific communication by preparing a research paper

General description:

Surface and interface science plays a pivotal role in modern research, especially in nanoscience, where the properties of nanostructures are predominantly governed by their surfaces. This field underpins critical advancements in microelectronics, catalysis, corrosion science, and beyond. The term "surface science" refers to the field dedicated to comprehending surface nature. Contemporary surface and interface physics is closely intertwined with other research areas. It has evolved with contributions from other branches of physics and chemistry, and it delivers results in key application fields, as well as in the advancement of experimental techniques and equipment. This lecture series explores the physics and chemistry of surfaces and interfaces, emphasizing their fundamental importance in understanding a wide range of phenomena.

Topics include the physical and electronic structures of surfaces, moleculesurface interactions, and the impact of these processes on various applications. Key techniques, such as electron diffraction, angle-resolved photoemission spectroscopy, scanning probe microscopy, and X-ray photoemission and absorption spectroscopy, will be discussed in depth. Their evolution to study surfaces and interfaces, including in "wet" conditions, highlights the interdisciplinary nature of this field, drawing from condensed matter physics, chemistry, and materials science. The course begins with an introduction to clean, well-defined surfaces, made accessible through advancements in ultra-high vacuum (UHV) technology. Students will explore surface-sensitive spectroscopic methods, the development of cutting-edge experimental tools, and adsorption processes, with a focus on their chemical and physical implications.

Real-world applications in semiconductor electronics, heterogeneous catalysis, nanotechnology, and electrochemistry will be examined, showcasing the transformative impact of surface science on these fields. As a practical component, students will have the opportunity to visit experimental laboratories where surface science technologies are actively applied. The visit, organized at institutions such as EMPA, PSI, or UZH, provides hands-on exposure to cutting-edge research environments.

Module GEO 866 Water in Switzerland

07SMGEO866 / Hausarbeit

Description:

General description:

Wasser in der Schweiz. Woher kommt das Wasser in der Schweiz? Was ist ein Jahrhunderthochwasser? Wie viel Wasser braucht die Schweiz? Warum ist Wasser so wichtig für die Schweiz? Dieser Kurs beantwortet viele Fragen rund um das Wasser in der Schweiz. In mehreren Modulen berichten verschiedene Wasserexperten über die vielen Aspekte des Wassers in der Schweiz. In den ersten Modulen eignen Sie sich verschiedene hydrologische Grundlagen an und erfahren mehr zu Niederschlag, Abfluss und wichtigen hydrologischen Konzepten. Auf diesem Wissen bauen die weiteren Module auf, in denen dann Themen wie Wasserqualität, Hochwasser und Wasserkraft behandelt werden. Mit einem Einblick über die Bedeutung von Wasser für Kultur und Kunst wird der Kurs abgerundet. Lernen Sie mehr über die hydrologischen Bedingungen in der Schweiz, staunen Sie über die Vielfältigkeit des Wassers und erfahren Sie, wie das Element Wasser den Alltag in der Schweiz prägt.

Der Kurs wird als selbstständiger Online-Kurs mit einer Einführungsveranstaltung und einer schriftlichen Prüfung durchgeführt.

ECTS: 2

Notes:

Diese Veranstaltung kann selbstständig in der vorlesungsfreien Zeit durchgeführt werden. Die Einführungsvorlesung findet gegen Ende des Semesters (Dez bzw Mai) statt, die schriftliche Prüfung zu Beginn des Folgesemesters.

Module BME 307 Microbiomes in health and disease

07SMBME307 / Block Course

Description:

General description:

This course focuses on the analysis of gut microbiomes in healthy subjects and in inflammatory bowel disease (IBD) patients. The composition of gut microbiomes is investigated by typisation of 16S rRNA genes. Analyses of microbial diversity within and across samples as well as exploratory supervised classification will be carried out with bioinformatics tools. Inflammation in the gut is assessed by histology and Western blotting of marker proteins.

ECTS: 6

Module BIO 253 Research cycle in Omics

07SMBIO253 / Block Course

Description:

General description:

In the framework of high-throughput analytical technologies, we implement research-based teaching and learning to experience how the research process works. Genomic analytical high-throughput technologies are revolutionizing science and the practice of medicine. Thus, as a joint state-of-the-art research and training facility of the ETH and the University of Zurich, the Functional Genomics Center Zurich (FGCZ) offers this course in NGS and MS-based technologies. In this course you learn about the research cycle in genomics/proteomics (transferable to any research field, not only in omics). You will be provided with a dataset of an already performed experimental evolution experiment. After an introduction into the topic and a literature review, you will form a research question you want to investigate with the dataset and a hypothesis. You will then form groups to answer your research question and have enough time to fully examine the dataset (dry lab only). You will learn how to explore mutations in a genome sequence (using IGV), how to correlate them to proteomics and other data and form associations with the phenotypic data. By the end of the third week, you will write an abstract about your research project and present your findings in a poster presentation at the Minisymposium that is happening in the last week.

ECTS: 6

Notes:

To be performed before starting a master. Participation to at least two other modules of the cancer biology master program.

REGISTRATION FOR BLOCKCOURSES HERE <https://www.mybioportal.uzh.ch>

Learning Outcome:

On completion of this module, students should be able to:

- Describe the research cycle and design an own research mini-project
- Generate and challenge hypotheses
- Analyse and evaluate formulated hypotheses and disseminate and present results from various omics data
- Plan a follow-up experiment
- communicate research findings

Module PHY 427 Electron microscopy lectures

07SMPHY427 / Course

Description:

General description:

The lecture course is meant to improve the knowledge about theory as well as practical aspects of electron microscopy of users working at the transmission electron microscope (TEM) as well as of colleagues who are confronted with TEM data and would like to know better, how these data are acquired and how they can be interpreted. The following topics are covered: Important concepts of optics (wave optics, coherence, etc.), concept of TEM and how is it built up, and different TEM techniques in theory and practical aspects.

Some of the lectures are more related to materials science aspects, some rather to biological aspects. All the lectures are prepared to be accessible for everyone, independently on their background (physics, chemistry or biology).

Learning Outcome:

Es werden mit aufsteigendem Schwierigkeitsgrad typische und relevante Erkrankungen im Neuroradiologischen Themengebiet als Fallbeispiele vom Dozierenden per Email zur Verfügung gestellt. Begleitet werden die Fallbeispiele von Fragen an die Studierenden.

In diesem Kurs werden insgesamt 14 Fälle von den Studierenden schriftlich bearbeitet.

Die Studierenden lernen sich in schriftlicher Form präzise in Bildbeschreibung und Differenzialdiagnose auszudrücken. Sie entwickeln eine Selbständigkeit in der Erarbeitung eines neuen Sachverhalts und erweitern ihr Wissen im Gebiet der Neuroradiologie.

Der Dozent gibt dem Studierenden ein direktes Feedback durch Zurücksenden des korrigierten Textes.

Eine Gesamtevaluation aller 14 Fälle wird vorgenommen anhand der Punkte: Richtigkeit der Beschreibung der Pathologie Benennung der Differenzialdiagnosen

Module BIO 314 Plant Epigenetics

07SMBIO314 / Block Course

Description:

General description:

This course offers a practical and theoretical introduction into the mechanisms of epigenetic gene regulation and their role in plant development. You will practice methods to assess the molecular and cytogenetic states of chromatin. This includes chromatin immunostaining, fluorescent in situ hybridization and high-resolution imaging; live treatment of plant tissues to modify the epigenome, AlphaFold to study drug action, SDS-PAGE and western blot to analyse chromatin proteins abundance. The methods are embedded in a research question where molecular and cytogenetic data are integrated with phenotypic analyses. Additionally, lectures are integrated in the course that cover molecular mechanisms and function of selected epigenetic processes in the development of plants and animals.

ECTS: 6

Notes:

REGISTRATION FOR BLOCKCOURSES HERE

<https://www.mybiportal.uzh.ch>

Learning Outcome:

By the end of this course, the students should be able to

- describe chromatin organization at the molecular and cytogenetic level
- identify and characterize the various levels of epigenetic regulation
- discuss different functions of epigenetic mechanisms in development
- describe the principle and use of experimental techniques for chromatin analyses (as practiced in the course) and design relevant controls
- interpret raw data produced by any of the techniques practiced in the course and make an informed decision on which question to pursue in depth.
- critically discuss a scientific publication in the field of epigenetics
- present scientific data collected in the practical course in the form of a poster presenting the concept and aim of the experiments, the results based on annotated images, graphs and statistical analyses, and a scientific discussion

Module PHY 210 Solid State Physics

07SMPHY210 / Lecture with Practical Exercises

Description:

General description:

Solid-state physics deals with the structure and resulting properties of condensed matter in the solid state. With the help of quantum mechanics, macroscopic properties (such as thermal and electrical conductivity and magnetic behavior) can be understood. Starting from various types of chemical bonds, we will learn about and apply the concepts of crystals, reciprocal lattices, band structures, and quasiparticles.

ECTS: 5

Learning Outcome:

We will discuss some fundamental concepts related to the following phenomena: periodicity and symmetry of crystals; simple crystal structures and diffraction techniques; bonds in crystals; phonons; thermal properties; electronic states in crystals; metals, semiconductors, and insulators; and the basics of magnetism and superconductivity.

The exercise classes take place alternately with the lecture every two weeks on Friday starting in the second week of the semester.

The laboratory course is offered as a separate module (PHY 220), in which you carry out experiments on solids and analyse the experimental data.

Module MAT 686 Seminar: Dynamics on the Circle

07SMMAT686 / Seminar

Description:

General description:

The main protagonists of this seminar are the circle S^1 and maps defined from the circle to itself. This concrete setting is an example of a “dynamical system”, since we can apply the maps repeatedly and mathematically investigate their behavior when the number of iterations grow.

Even though the setup is quite simple, these transformations of the circle provide a rich and interesting family of examples of both chaotic and non-chaotic dynamical systems. They were first considered by Poincaré while studying solutions of differential equations on the torus and are still nowadays an active area of research.

The first talks will revolve around the theory of circle rotations and the classification of circle homeomorphisms, which provide a classical and well-understood example of entropy zero systems.

In the later parts of the seminar, we will also take on the study of piecewise expanding circle maps, which are simple examples of chaotic transformations with positive entropy

Even though the different talks fit together into a unified theory of circle maps, the weekly topics do not build on each other a lot. This means it is possible to understand also the later topics without having heard yet about the topics from the beginning of the course.

ECTS: 3

Notes:

Mathematical Fields: Analysis and Geometry/Topology

Learning Outcome:

Understanding of some of the basic notions, theorems and techniques in dynamical systems in the case of circle maps.

Gaining confidence in giving a talk about Mathematics.

Optional: Dynamical Systems in general and circle maps in particular are well-suited both for numerical experiments and graphical visualization. The students are strongly encouraged to experiment with possible tools for this and enhance their presentations using simulations etc.

Target Groups:

BSc and MSc students.

Languages of Instruction:

English

Course Materials:

There are many resources for the topics that will be discussed. Every weekly talk will come with some suggested materials. Some of those references are:

- Michael Brin and Garrett Stuck. Introduction to dynamical systems
- Robert Devaney. An introduction to chaotic dynamical systems.
- Yiheng Dong, Marco Martens and Liviana Palmisano. One-Dimensional Dynamics: From Poincaré to renormalization
- Wellington de Melo and Sebastian Van Strien. One-dimensional dynamics.

Anatole Katok and Boris Hasselblatt. Introduction to the modern theory of dynamical systems.

- Will J. Merry. Sixty Lectures of Dynamical Systems
- Clark Robinson. Dynamical systems: stability, symbolic dynamics and chaos.

Merkmale: Target Group: Suitable for English Speakers

Responsible instructor: Corinna Ulcigrai

Requirements:

Prerequisites: The course is quite self-contained and requires only knowledge of the first year courses Analysis I/II.
Even though it is not strictly necessary to have taken the lecture “MAT733 Dynamical Systems and Ergodic Theory” (or similar) prior, this seminar serves as a nice continuation of concepts and ideas seen in a basic lecture on dynamical systems.

Assessment:

- Prepare a talk and present it in class.
- Produce a LaTeX document containing the main points of their topic as well as some in-depth material. This can be a simulation, solved exercise, visualization etc.
- Be present throughout the semester and participate actively

Module BME 358 Animal disease models in modern biomedical research

07SMBME358 / Block Course

Description:

General description:

Animal models are essential to understand the pathophysiology and provide treatment modalities of inherited and acquired diseases. Recent advances in genome engineering and detailed phenotyping have eased the generation and utility of model organisms in translational sciences. This course will offer insights and hands-on experience in mammalian (mouse), lower vertebrate (*Xenopus*), and *Drosophila melanogaster* kidney models to explore their unique advantages as well as limitations. The module will focus on the crosstalk between the immune system and the vasculature in several organs, inherited developmental disorders, mechanisms at the kidney filtration barrier and kidney diseases.

ECTS: 6

Notes:

REGISTRATION FOR BLOCKCOURSES HERE

<https://www.mybioportal.uzh.ch>

Learning Outcome:

On completion of this module, the student should be able to explain the concepts of how animal models are genetically modified, describe how model organisms can be used in translational bio-medicine, design gene targeting and genome editing strategies, conduct experiments on tissues from animal models (including antibody staining, microscopy and histological analysis), and critically discuss experimental results obtained in the course or from literature examples. The student should perform basic techniques in molecular biology.

Module Vision Algorithms for Mobile Robotics (L+E)

03SMDINF2039 / Lecture with Practical Exercises

Description:

General description:

Have you ever been curious to learn the perception algorithms used in today's self-driving cars and drones and what they have in common with virtual and augmented reality? Then this course is for you! This course introduces you to the key algorithms behind Apple ARKit, Google Visual Positioning Service, Microsoft Hololens, Magic Leap, Oculus Quest, Oculus Insight, and the NASA Mars rovers. In particular, we course will cover these topics: image formation, filtering, feature extraction, multiple view geometry, dense reconstruction, tracking, image retrieval, event-based vision, visual-inertial odometry, and deep learning. Each lecture will be followed by a lab session where you will learn to implement the building block of a visual odometry algorithm in Matlab. By the end of the course, you will integrate all these building blocks into a working visual odometry algorithm.

ECTS: 6

Notes:

This module can be credited towards either the Master's or Doctoral level. (Please note that this module can be credited towards a degree only once.) Lectures will take place from 8 to 9:45. Exercises will take place from 12:15 to 13:45.

Learning Outcome:

By the end of the course you will know how to implement the fundamental computer vision algorithms used in mobile robotics, in particular: image formation, filtering, feature extraction, multiple view geometry, dense reconstruction, object tracking, image retrieval, event-based vision, visual-inertial odometry, and deep learning.

Module GEO 879 Mobility Issues in GIScience

07SMGEO879 / Lecture with Practical Exercises

Description:

General description:

Digital transformation impacts many aspects of our society, and geographic information technology is one of the enablers of digital transformation in geography. In this course, we will explore how digital transformation manifests itself in GIScience and selected geography- related fields. We study how digitalisation links the physical and the virtual world, the digital space and place, how humans and machines interact, and what this means in the context of GIScience. The main focus will be on human mobility and human behaviour in physical & digital space, context modelling, and adaptation. Moreover, we discuss relevant cross-cutting topics, such as ethics, privacy issues, human- machine interaction, AI, automation, or citizen as sensors. This course is an interactive seminar, and we will read relevant papers and discuss them during the sessions in small groups and the plenary. Moreover, in the practical part of the course, we will explore mobility issues and map use behaviour in a small project.

ECTS: 3

Learning Outcome:

- You can explain the relevance of digital transformation in GIScience through examples.
- You are aware of the manifold relationships and feedback loops between physical space, social space, digital space, and human behaviour.
- You have an understanding of mobile map interactions and human behaviour in geographic and digital space
- You can evaluate the chances and risks of digital transformation for society, particularly in GIScience (ethics, privacy, AI, ...).
- You can approach and critically reflect upon a new topic in geography and present a synthesis either in oral or written form.

Target Groups:

Master's students with major in geography or GIScience
Students from other disciplines, please contact the instructor.

Languages of Instruction:

English

Course Materials:

Interactive lectures, reading and discussion of papers, oral presentations, practical group exercises, and a group project. All class materials will be available through OLAT.

Merkmale:

Target Group: Suitable for English Speakers

Responsible instructor:

Tumasch Reichenbacher

Requirements:

Prerequisites:

BSc, own computer with access to Zoom

Prior Knowledge:

Basic knowledge of Python

Assessment:

The assessment for the module GEO 879 is distributed across two parts:
1. The seminar part (GEO879.1) is assessed and graded through a group presentation and individual participation in the discussions. The seminar part contributes 40% to the final grade. Personal attendance in the seminar sessions is mandatory!

2. The lab part (GEO879.2) is assessed by a group project, composed of a project proposal presentation, a final project presentation, the project quality, and a written project report.

The project part contributes 60% to the final grade.

To pass the entire module GEO879, you will need to achieve at least 60% of the sum of both parts, seminar and project. You need to repeat the entire module if your grade is less than 60%.

Im neuen Rahmenlehrplan sind transversale Kompetenzen neben fachlichen Kompetenzen als integraler Bestandteil des Unterrichts verankert. Im Seminar steht die Frage im Zentrum, wie transversale Kompetenzen im gymnasialen Fachunterricht sinnvoll gefördert und sichtbar gemacht werden können. Die Studierenden setzen sich mit zentralen transversalen Kompetenzbereichen auseinander und entwickeln Unterrichts- und Lernkonzepte, die fachliches und transversales Lernen verbinden. Design Thinking dient dabei als kreativer, kollaborativer und prozessorientierter Zugang zur Gestaltung von Lernprozessen, die komplexe Fragestellungen thematisieren.

Module AST 231 Astronomy practicum: II

07SMAS232 / Praktikum

Description:

General description:

Take spectacular images of nebula, galaxies, star clusters etc.

ECTS: 6

Notes:

Limited number of places.

Registration by email to Ben Moore. Note: This course is only open to those students taking either the minor programs in astrophysics, or astronomy & astrobiology.

For more information: <http://www.ctac.uzh.ch/teaching/astrophotography/>

For more information: please contact ben.moore@uzh.ch

Learning Outcome:

The aim is to take high quality astronomical imaging data of an interesting object of your choice. Our telescope is a high quality precision instrument, but it is not the Hubble Space Telescope. However, because of its large field of view you can still take quite spectacular images with this equipment. This makes it ideal for astrophotography of nebula, galaxies, star clusters etc.

Target Groups:

Participants of the minor program Astronomy and Astrophysics

Languages of Instruction:

English or German

Merkmale:

Target Group: Suitable for English Speakers

Responsible instructor:

Ben Moore

Requirements:

Prerequisites:

Successful completion of Part I. enrollment in one of the minor programs in Astronomy & Astrobiology, or Astrophysics. (If available, open to all students of the university but please contact the module coordinator first).

Assessment:

You will be able to reserve a telescope for several weeks at a time so you can take it to a site that is as 'dark' as possible. You will take data, reduce the data and write a report. It is a lot of work but a lot of fun.

Module Roman Civil Law

02SM60PM5 / Prüfung ohne Lehrveranstaltung

Description:

General description:

Das Modul Römisches Privatrecht dient der Einführung in das Studium des Privatrechts. Entsprechend werden grundlegende Institute, wie Eigentum und Vertrag, Rechtsfiguren, wie Stellvertretung und Auftrag sowie Rechtsprinzipien, wie Formalismus und Typenzwang, am historischen Beispiel vorgestellt und analysiert. Das Römische Privatrecht bildet die gemeinsame Grundlage der europäischen Privatrechtsordnungen und war auch für die Entstehung des schweizerischen Obligationenrechts und Zivilgesetzbuchs massgeblich, weshalb diese Regelungen ebenfalls vergleichend vorgestellt und gewürdigt werden. Im Einzelnen erhalten die Studierenden Einblick in die Institute und Prinzipien des Personenrechts, des Sachenrechts und vor allem des Obligationenrechts in Form des Vertrags- wie des Haftpflichtrechts. Ein besonderer Schwerpunkt liegt dabei auf der Analyse von römischrechtlichen Quellentexten (in deutscher Übersetzung), die bestimmte Problemlagen und Fallgestaltungen veranschaulichen und es erlauben, Gemeinsamkeiten und Unterschiede zwischen dem antiken römischen Recht und der heutigen Rechtslage zu erfassen und herauszuarbeiten.

ECTS: 7.5

Notes:

Wenn Sie dieses Modul buchen, sind Sie für die Prüfung im aktuellen Semester (FS oder HS) angemeldet - die Prüfung wird jedes Semester angeboten. Die Prüfungsanmeldung sollte aber frühestens im 2. Semester (FS) vorgenommen werden.

Learning Outcome:

Die Studierenden lernen zentrale Institute des Römischen Rechts sowie die Methode der Textexegese, d.h. der systematischen Interpretation römischrechtlicher Texte, kennen. Anhand dieser Grundlagen soll das eigene juristische Denken erprobt und geschärft werden - eine Fähigkeit, die auch für den verständigen Umgang mit dem geltenden schweizerischen Privatrecht unerlässlich ist.

Module Legal Methods and Legal Theory

02SM60PM3 / Prüfung ohne Lehrveranstaltung

Description:

General description:

Die Lehrveranstaltung führt in die Grundlagen der Methodenlehre sowie der Rechtstheorie ein. Thematisiert werden dabei die juristischen Auslegungs- und Argumentationsmethoden, die Beziehung zwischen Recht und Sprache, Probleme der juristischen Begründung sowie die ideengeschichtliche Einordnung der Methodenlehre in theoretische Diskurse. Die Verbindung von juristischer Auslegung und Begründung mit normativen Theorien wird untersucht und wesentliche Probleme normativer Theoriebildung werden erörtert. Ein Überblick über Form und Kerninhalte von Rechtsordnungen aus theoretischer Perspektive soll verschafft werden, um die Frage nach dem Gehalt und der Legitimation der Leitideen moderner Rechtsordnungen und ihrer Rolle in der Rechtsanwendung zu beantworten. Welche Bedeutung haben Gerechtigkeit, Freiheit, Gleichheit und Würde von Personen in der konkreten Rechtsanwendung und juristischen Argumentation? Welche anderen normativen Prinzipien sind relevant? Weiter wird untersucht, welchen Grad an Gewissheit die Auslegung und Begründung von Recht gewinnen kann. Welche Rationalitätsansprüche können in einer Rechtskultur eingelöst werden? Welche sind für einen demokratischen Rechtsstaat unverzichtbar? Die Reflexion der Methoden der Rechtsanwendung, so wird sich zeigen, führt zwangsläufig zu einer ideengeschichtlich orientierten Theorie von Demokratie, Menschenrechten und rechtlicher Gerechtigkeit.

ECTS: 3

Notes:

Weitere Informationen werden eine Woche vor Semesterbeginn über die Website von Matthias Mahlmann zugänglich gemacht.

Learning Outcome:

1. Kenntnis und Verständnis der juristischen Auslegungsmethoden
2. Entwicklung eines kritischen Methodenbewusstseins
3. Kenntnis grundlegender Begriffe der Rechtstheorie
4. Kenntnis und kritische Reflexion wesentlicher Elemente der Rechtstheorie
5. Entwicklung der Kompetenz zur folgerichtig begründeten, selbstkritischen Argumentation
6. Anwendung methodologischer und theoretischer Konzepte und Argumente auf konkrete Fallbeispiele

Module Comparative Private Law

02SM90CL5 / Course

Description:

General description:

This course is designed to equip students with a methodologically grounded understanding of approaches to comparative private law. It begins with an introduction—based on selected key readings—to the historical development of comparative law and the evolution of its methodological frameworks (Babusiaux). Building on this foundation, the course will explore specific domains, in particular contract law (Doralt), property law, including real securities (Alonso) and land registration law (Fiocchi), and the law of succession, with special focus testamentary freedom and forced heirship (Liebrecht), in order to illustrate and apply methodological considerations in concrete legal contexts.

Active participation requires prior engagement with the assigned readings, which will be made available in full via OLAT. Assessment will consist of a critical evaluation of a scholarly text addressing issues in comparative law. A foundational knowledge of private law across diverse legal systems is assumed.

ECTS: 6

Notes:

The course will introduce students to contemporary concepts and methods of comparative law. It will illustrate the functions of comparative law by examples taken from various systems of law as well as sources of uniform law.

Module Legal Theory

02SM90GL14 / Course

Description:

General description:

The module offers an outline of key issues of a theoretical reflection of law and justice. It will discuss some historical examples of the evolving theoretical reflection of law and its ethical foundations. In addition, central analytical and normative problems will be considered concerning the structure and content of law and its relation to ethical thought. A special focus of attention will be contemporary cognitive science and its impact on the understanding and conceptualisation of law, including the structure and origin of moral cognition and the problem of free will. The course will offer a critical assessment of these approaches that form one of the most important issues in the contemporary reflection about law. Serious thought on these matters, it will be argued, leads to central problems of our human self- understanding that are of foundational importance for our concept of law. The theoretical reflection and its results will be exemplified by concrete cases including target killings, torture and other issues of civil, criminal, public law and the adjudication of human rights.

Module Law and Religion

02SM90GL16 / Course

Description:

General description:

Religionen waren und sind prägende Elemente sozialer Ordnungen. Es stellt sich in unserer Rechtsordnung deshalb die Frage, wie religiöse Gruppen, Überzeugungen und Praktiken rechtlich bewertet werden sollen. Die Vorlesung zeigt die völkerrechtlichen, verfassungsrechtlichen und gesetzlichen Grundlagen für den Umgang mit Religionen und widmet sich dem Verhältnis von staatlichem Recht und Religion - auch in rechtsvergleichender Perspektive. Der Blick richtet sich aber nicht nur auf die Positionen von Religionen und ihren Rechten im staatlichen Recht. Religiöse Traditionen werden immer wieder auch im Zusammenhang von religiösen Rechtsbildungen wirksam, führen doch religiöse Überzeugungen häufig zur Entstehung von Rechtsregeln insbesondere für die Angehörigen religiöser Gruppen. Daher wird auch das Thema des religiösen Rechts in der Vorlesung in den Blick genommen. Dazu wird etwa das Recht der christlichen und der islamischen Religion von seinen Grundlagen her betrachtet.

Module Art Law and Culture

02SM90GL9 / Course

Description:

General description:

Das Modul untersucht Themen, die das gesellschaftliche Zusammenspiel von Kunst, Wirtschaft, Staat und Recht betreffen. Was ist "Kunst"? Wie unterscheidet sich der Kunstbegriff des Kunstsystems von jenem des Rechts? Wie steht es mit der Autonomie der Kunst, wenn Kunstwerke gehandelt werden? Ist "Kunst" dasselbe wie "Kultur"? Diese Fragen bilden den Fluchtpunkt rechtssoziologischer Reflexion, stehen aber gleichzeitig im Zentrum der aktuellen Diskussion über die Bedingungen, unter denen autonom kreatives Schaffen in einer global vernetzten Welt möglich ist.

Die praktische Relevanz dieser Fragen zeigt sich bei Beschränkungen der Kunstfreiheit durch staatliche Interventionen ebenso wie bei Massnahmen der staatlichen oder privaten Kunstförderung, die Autoren in besonderer Weise ihrer künstlerischen Freiheit berauben können. Sie zeigt sich ferner im Bereich des Urheberrechts, das KünstlerInnen zwar eine Möglichkeit zur Selbstfinanzierung bietet, sich aber gleichzeitig auch hemmend auf die Entstehung neuer Kunst auswirken kann (z.B. bei Collagen oder Remix-Kunst). Negative Auswirkungen des internationalen Handels mit Werken bildender Kunst machen häufig Schlagzeilen. Tatsache ist, dass jährlich viele Kunstwerke illegal grenzüberschreitend gehandelt werden.

Für das Recht stellt sich die schwierige Frage, nach welchen Grundsätzen solche Missstände verhindert werden können, ohne den legalen Kunsthandel unnötig einzuschränken.

Module International Sales Law (CISG)

02SM90IL13 / Course

Description:

General description:

This course is designed to introduce students to the theoretical and practical problems of international sales law and the legal solutions served by the United Nations Convention on Contracts for the International Sale of Goods (CISG), which entered into force in 1988 and counts today more than ninety contracting states. The course focuses mainly on the scope of application of the CISG, the hierarchy between the CISG and national sales law provisions, formation of the contract under the CISG, obligations of the parties and remedies in case of non-performance, and the liability regime of the CISG. The course aims also to use the CISG as a base to discuss differing approaches in Civil Law and Common Law jurisdictions, thereby facilitating students with international background to scrutinize their own national sales law system.

ECTS: 6

Learning Outcome:

On completion of this course, students will be able to:

- Identify conflicts regarding international sales contracts and find suitable solutions either based on contractual provisions or default rules of the United Nations Convention on Contracts for the International Sale of Goods (CISG);
- Define comparable rules in their own national sales law provisions and assess the relation of these rules to the CISG.
- Critically question their national sales law provisions in light of international developments.

Target Groups:

Students who are interested in comparative law as well as in international trade law / Exchange students / Students participating in the English LLM Programme.

Languages of Instruction:

English

Course Materials:

The PowerPoint presentations as well as the necessary reading will be available on the course website.

Module International Trade Regulation

02SM90IL14 / Course

Description:

General description:

This course deals with the three central developments in the field of international trade regulation since the end of the Second World War, namely multilateralism, preferentialism and (coordinated) autonomy. The course begins with outlining the quasi-constitutional basis of international trade regulation to be found in the law and policy of the World Trade Organisation (WTO). Topics include the principles of non-discrimination and transparency, the pursuance of legitimate policy objectives other than trade liberalisation (such as the protection of the environment and human and animal life and health), non-tariff measures (such as rules on technical regulations and subsidies), and current developments (such as economic coercion, the dissolution of the WTO Appellate Body, trade sanctions in reaction to international aggression, and the (potential) trade war between the US, China and the rest of the world). Special attention is given to the case law of WTO panels and Appellate Body. The course then proceeds to discuss the law and policy of free trade agreements. Of particular interest are examples of regulatory innovation in selected free agreements which the US, the EU and Switzerland have concluded with partners all over the globe. Moreover, the relevance of "mega regionals" and plurilateral initiatives, such as EU-MERCOSUR, RCEP, CETA, or the Joint Statement Initiative on E-Commerce is discussed. The course concludes with a view on the newest regulatory development in international trade regulation: (coordinated) autonomy in the form of unilateral trade measures which link market access with trade-related interests (such as climate change, forced labour, or deforestation). The focus lies on the different variations of (coordinated) autonomy as evidenced in recent US, EU and Swiss trade policy decisions.

Module European Criminal Law

02SM90IL3 / Course

Description:

General description:

The course offers a systematic introduction to the field of European Criminal Law combining European Union Law and Council of Europe Law. The course will cover substantive criminal law (e.g. money laundering, terrorism) as well as criminal procedure (most importantly mutual legal assistance and law enforcement institutions). In the first part, particular attention will be paid to the structures and constitutional foundations of European Criminal Law and its fundamental rights framework. The powers and limits of law- and policy-makers in the European realm will be subjected to critical analysis. The second part of this course continues with an overview of the main substantial and procedural issues in the field of European criminal law before turning to more in-depth explorations of selected up-to-date topics. Among others, innovations in the EU will be studied (EPPO, mutual recognition, e-evidence) and discussed in terms of their compatibility with human rights, traditional tenets of criminal procedure and basic concepts of justice. Finally, the delicate position and options of Non-EU-countries will be addressed.

ECTS: 6

Learning Outcome:

After the successful completion of this course students have developed a solid understanding of the sources, structures, contents, and finalities of the multi-layered area of European Criminal Law. Swiss Criminal Law and Criminal Procedure This introduction to Criminal Law and Criminal Procedure Law provides an essential understanding of the criminal justice system in Switzerland, with special emphasis on some contemporary issues. The lecture covers the applicable codes, the practice resources, and the agencies specific to criminal procedure.

7. Swiss Civil Procedure

Switzerland is an important venue for both international litigation and arbitration. As many foreigners have assets in Switzerland, enforcement plays an important role in the international context as well. The lecture addresses the following subjects: Swiss civil justice and court system; civil procedure and enforcement of money debts; international litigation (jurisdiction, recognition and enforcement); arbitration.

8. Roman Law

The University of Zürich, as many other in continental Europe, keeps Roman Law as part of its curriculum of legal studies. This introduction aims at illustrating through a few specific examples the whys and the hows of this third life of Roman law as part of a modern legal education.

9. Legal History

The lecture will provide a survey on perspectives and topics of legal history in the period from late antiquity and early middle ages up to modern times. Special attention is given developments and evolutionary tendencies of law and legal knowledge in the region of present-day Switzerland and its entanglements with European legal history. Features and topics to be discussed include the changing relation between law and religion, the rise of autonomous norm setting by *conjuratio*, the development of Swiss natural law theories, the Swiss Enlightenment, and the Swiss contribution to the history of international law.

10. Legal Sociology

This class is an introduction to Legal Sociology with particular focus on the interaction between law and society in the Swiss model of direct democracy. What are the preconditions of direct democracy in Switzerland, what resources are required and how can they be renewed? What is the law's role in this?

11. Legal Philosophy

The lecture provides an introduction to the philosophical foundations of law. In particular, it will be asked: What is

the relation of justice and law? Examples will be drawn from Swiss law and from for Switzerland relevant European and International law.

Module The 3Rs and the ethics of animal research

10SMSTS-101 / Module

Description:

General description:

Animal experimentation is a topic of intense social, scientific, legal, and ethical debate. Issues surrounding animal welfare, animal rights, research freedom, and the quality of scientific studies will remain highly relevant for students across a range of disciplines. This course facilitates discussions on the challenges faced by medicine, natural sciences, and social sciences, encouraging a collaborative approach to addressing these issues.

Through a combination of lectures, discussions, a lab visit and group work, the course offers participants the opportunity to analyze complex problems from multiple perspectives, critically examine their own beliefs, and engage in interdisciplinary exchanges. It is designed to help students develop well-informed and nuanced opinions on the socially and scientifically significant topic of "Science and Animal Use," regardless of whether they are directly involved in animal experimentation themselves.

ECTS: 1

Notes:

- Introduction to the public discourse on the topic of animal experiments (including the visit of an animal research facility)
 - Introduction to Swiss legislation and the legal regulation of animal experiments
 - Introduction to ethics and various ethical theories and concepts
 - Introduction of the 3Rs and 3Vs concepts and their function
 - Introduction to harm-benefit analysis as a method to determine the ethical acceptability of animal experiments
- Quick intro: <https://t.uzh.ch/1Po>

Learning Outcome:

The course aims to help students develop a well-informed and nuanced opinion on this socially and scientifically significant topic. This applies whether they conduct animal experiments themselves, use and evaluate data derived from such experiments, or assess and represent perspectives on science and animal use as members of society.

Target Groups:

Bachelor, Master, Doktorat

Languages of Instruction:

Englisch

Merkmale:

Target Group: Suitable for English Speakers

Module Proseminar

02SM120PS / Proseminar

Description:

General description:

In Vorlesungen pflegen Sie in grossen Gruppen die erstmalige Einführung in ein Sach- oder Rechtsgebiet zu erhalten. Im Proseminar des dritten Semesters erhalten Sie demgegenüber endlich die Möglichkeit, selbst einen eigenständigen Zugang zu Fragen und Verästelungen des wissenschaftlichen Denkens zu finden und Ihr eigenes Recherchieren einzuüben. In thematischer Hinsicht wird im Proseminar Wert darauf gelegt, Ihnen eine Einführung in einige Grundfragen und Diskussionsstände zu vermitteln. Ihre Teilnahme setzt dabei Selbstinitiative, also aktives Studieren und Forschen, voraus. Zugleich werden sie die Chance erhalten, anhand von spannenden rechtswissenschaftlichen Themen Ihre Schreibfertigkeiten zu verfeinern und an Ihren Argumentationsfähigkeiten zu feilen. Sie lesen kritisch Texte und Quellen, bearbeiten knifflige Problemstellungen, debattieren kontroverse Fragen und durchleuchten Standpunkte. Sie geben Ihren Kommiliton*innen fundierte Feedbacks und profitieren von deren Feedbacks. In den Präsenzveranstaltungen bieten sich Ihnen Gelegenheiten für Präsentationen und unterschiedliche Diskursformate.

Es stehen verschiedene Proseminargruppen aus unterschiedlichen Fachgebieten zur Auswahl.

ECTS: 3

Notes:

Bitte beachten Sie, dass die Teilnehmendenzahl je Proseminargruppe beschränkt ist. Sie können bei der Anfrage via Vorlesungsverzeichnis/Merkliste pro Gruppe eine Präferenz vergeben.

Die Detailinformationen zu den Proseminaren werden wir Anfang August 2026 auf folgender Website aufschalten: <https://www.ius.uzh.ch/de/studies/during-studies/modules-records/thesis-papers.html#Proseminar>

Learning Outcome:

Sie können eine ausgewählte rechtswissenschaftliche Fragestellung entwickeln, diese fachlich fundiert bearbeiten und die Ergebnisse methodisch korrekt und in lesefreundlicher Sprache präsentieren.

Sie sind in der Lage, sich fachlich versiert und argumentativ geübt in juristische Diskurse einzubringen.

Im Proseminar schaffen Sie sich eine profunde Basis für die künftigen schriftlichen Arbeiten, insbesondere die Bachelorarbeit.

Course Materials:

Verschiedene Materialien werden von den Dozierenden des jeweiligen Proseminars zur Verfügung gestellt.

Module Transnational Organised Crime - The UN Perspective

02SM120WM4 / Course

Description:

General description:

Contemporary Crime and Criminal Justice are increasingly characterised by the globalisation of criminal activities and international efforts to combat transnational crime. This course explores the international legal framework and best practice guidelines to prevent and suppress transnational organised crime, including drug trafficking, trafficking in persons, and the smuggling of migrants. The course outlines and examines the criminalisation of these activities and analyses national and international efforts to investigate such crime and prosecute offenders.

The course is designed to give students a comprehensive understanding of contemporary patterns and characteristics of transnational organised crime and relevant international conventions in this field. The seminars, individual and team-based exercises, and assessment in this course invite students to gain insight into the levels and characteristics of various types of organized crime and critically reflect on international, regional, and domestic laws and policies designed to combat these phenomena. The course enhances students' abilities to engage with and research policy documents and legal material, critically analyse legislation, case studies and scholarly writing, present research findings to academic audiences, and elaborate practical recommendations for law reform and policy change relevant to the subject area.

Module Law and Technology - a Cross-Continental Perspective

It is the aim of the course to teach, encourage and nurture creative legal (and technological) thinking when contemplating questions such as the possible regulation and/or promotion (for example, through patents) of technology and technological change.
